

ONE SYSTEM
PREDICTABLE RESULTS

Patented installation system that has been independently tested and verified for industrial use.

EFFICIENCY

Standardised installation that reduces installation time by up to 40% to 70%. It requires fewer installers and creates a smoother, more consistent production and construction flow.

QUALITY

Mounting and fastening in one operation delivers repeatable results. No holes in the frame. No post adjustments. Fewer damages, complaints, and warranty cases.

SUSTAINABILITY

Reduced resource use, improved working conditions, and the possibility of reuse. Consistent sealing supports maintained energy performance in high efficiency buildings.

CLICK IN® - WINDOW INSTALLATION AND FASTENING IN ONE CLICK

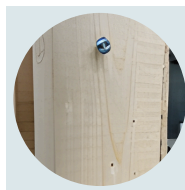

Demand for efficiency, quality, and sustainable construction processes is increasing across the industry. Click In® is developed to meet these demands through a standardised installation solution that simplifies installation, reduces resource use, and can be integrated into a industrial production and delivery flows, both onsite and prefab.

Click In® is tested, documented, and proven in real projects.

- 40% to 70% faster installation compared with traditional methods
- 30% to 50% fewer installers in larger projects
- 0 post adjustments across more than 150,000 installed windows
- Reduced damage to frame, paint, and glass, leading to lower warranty and service costs
- Up to 20 hours saved per house (15 windows)

HOW IT WORKS

Click In® replaces traditional fastening with a click in bracket mounted to the window at the factory. Screws are positioned in the wall in advance. When the window is delivered, it is clicked into place, adjusted if needed, and fully installed in a single operation.

Pre installed bracket

The bracket is mounted to the window in the factory, simplifying installation for the customer and ensuring a consistent, repeatable result.

Pre positioned screws

The screws are placed in the wall in advance, saving time on site and minimising the risk of incorrect installation.

Click. Done.

The window is clicked into place, adjusted if needed, and fully installed in one operation. Faster and safer, with no post adjustments and no intervention in the frame.
