--	--	--	---	-----------------

LogisALL Group is an innovative logistics company that has established logistics standards and expanded its logistics equipment pooling system.

(As of December 2024)

LogisALL, established in 1985, was the first company in Korea to introduce a logistics equipment pooling system, setting the foundation for standardized and efficient logistics operation. Headquartered in Korea, with logistics centers nationwide, LogisALL operates 20 subsidiaries including LogisALL Vietnam, LogisALL China, and others, delivering comprehensive logistics and pooling services across 21 countries worldwide.

As the world’s largest operator of a logistics equipment pooling system, LogisALL continues to lead the industry in logistics standardization and optimization by promoting the reusable use of assets such as pallets and containers. With a stable supply of high-quality equipment, we offer smart, sustainable total logistics solutions that enhance operational efficiency and reduce costs.

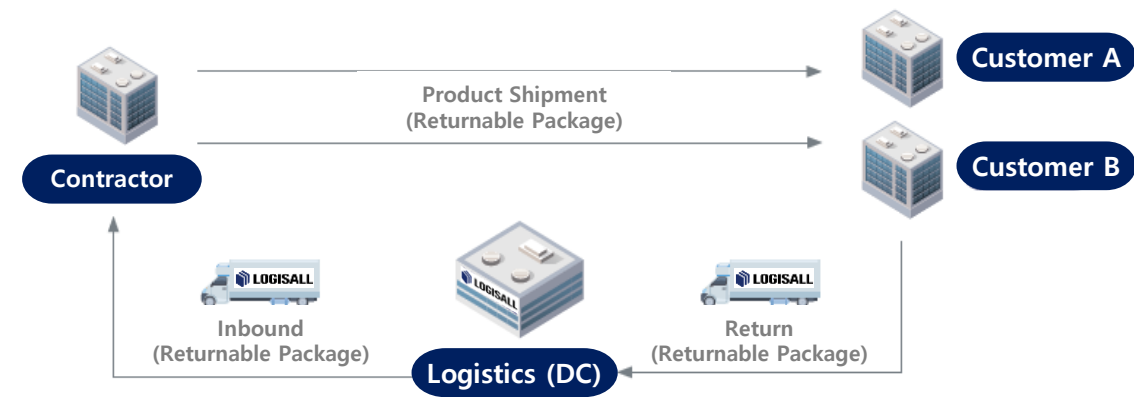

Pooling services enhance logistics efficiency while prioritizing sustainability.

A *pooling system* standardizes the specifications of logistics equipment such as pallets and containers, enabling shared use across multiple companies.

By adopting a pooling system, companies can significantly reduce their initial investment costs and minimize resource waste, while greatly improving productivity throughout the logistics process. In addition, LogisALL provides a comprehensive quality management service—including re-collection, washing, maintenance, and inspection—ensuring clean and safe logistics equipment at all times.

Notably, the pooling system achieves both logistics efficiency and environmental value. Compared to single-use pallets, it can reduce greenhouse gas emissions by up to 73%, which is equivalent to planting 74.5 million trees annually. LogisALL’s pooling system goes beyond reducing logistics costs—it plays a key role in building a sustainable logistics ecosystem.

<Structure of the Pooling System>

Realization of Eco-Friendly Logistics

We achieve eco-friendly logistics by adopting transport-efficient designs, utilizing recycled materials in logistics equipment, and operating a reusable pooling system.

Global Logistics Visibility

By utilizing IoT technology and RFID tags, we can track the routes and history of cargo transported worldwide, enabling easy analysis and management of logistics volume.

Expansion of Global Logistics Hubs

LogisALL operates overseas branches worldwide to provide access to its innovative logistics equipment anytime and anywhere, continuously expanding its presence across regions and businesses.

We drive continuous innovation through relentless challenge and expansion.

LogisALL provides comprehensive solutions by developing industry-specific logistics equipment—tailored for sectors such as food, retail, chemical, automotive, and aviation—based on cutting-edge packaging technology. We also offer customized products to meet the unique needs of each client.

Our *Packaging Innovation Center* enhances product reliability and competitiveness through ongoing research, development, and quality control. Additionally, LogisALL’s *CES Smart Logistics Solution Package* integrates logistics consulting-based engineering with advanced IT systems, helping clients strengthen their logistics capabilities.

Packaging Development & IT Solutions

- Domestic and international R&D / manufacturing partnerships  
→ Development and supply of customized packaging materials & logistics equipment
- TraPlatform and Ultravis Solution Provided  
→ For optimized inventory management & real-time visibility

Logistics Efficiency Enhancement Solutions

- Improved transport and storage efficiency and safety of logistics equipment  
→ Supply of foldable, nestable, and steel-structured
- Safe and hygienic production, storage, and transport services  
→ Hygiene ensured through cleaning services and use of liner bags

Value-Added Services & Global Supply Chain Integration

- Designing and providing optimal logistics services tailored to customer needs  
→ Realization of end-to-end global logistics, from raw material sourcing to reverse logistics
- Building a global supply chain through domestic and international networks and strategic partnerships  
→ Infrastructure including manufacturing bases and logistics networks (transportation, storage, and outsourcing services)

PALLET

RRPP

**RRPP (Recycled Reusable Plastic Pallet)** is an eco-friendly pallet made from recycled plastic, designed for import and export logistics. Operated within a global pooling system, it can be reused multiple times, significantly reducing logistics costs compared to conventional single-use pallets. Equipped with RFID tags, RRPP enables real-time tracking of cargo movement. Its patented mold structure and recyclable materials ensure superior durability and sustainability.

R

Recycled

Use of reusable eco-friendly materials

R

Reusable

Enhanced durability with the application of patented mold design technology

P

Plastic

Setting a new benchmark for global pallet standardization

P

Pallet

Smart pallet embedded with an RFID tag

• ISO-180000 6C C1 G2

• GRAI 96bits

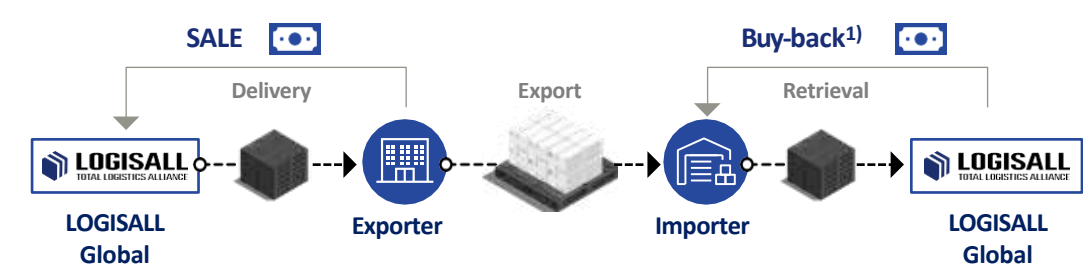

Tag Packaging

RFID Tag

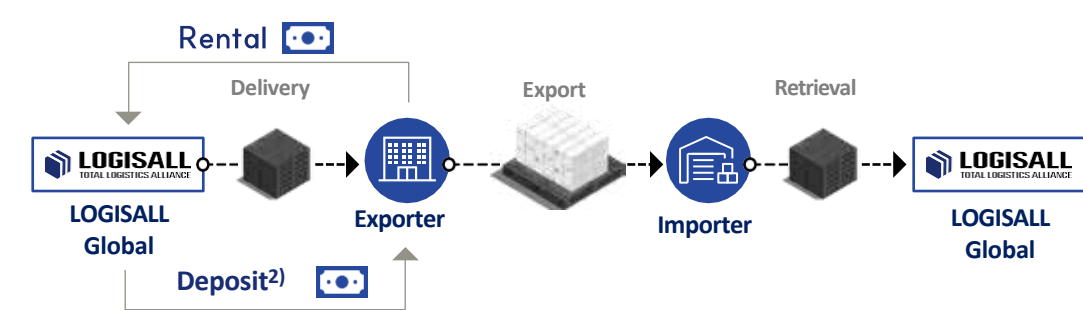

A specially designed RFID Tag that is highly durable is inserted into the center of the pallet for recognition

RRPP Operation Method

**Sale & buyback (Export)** (Export)  
RRPP pallets are sold to the exporter, and when returned at the import destination, they are repurchased(‘Buy-back’) at an agreed price.

**Deposit & Rental (Domestic)** (Domestic)  
The shipper pays a deposit upfront, and after use, when the pallets are returned to the collection company, the agreed amount is refunded to the shipper.

RRPP Product Types

Performance Analysis (Trip / Turnover Rate, etc.)

Settlement / Invoice

Global RRPP

Manage RRPP production information, asset details, and cleaning history

Track movement information, status, and inventory data of RRPP units between hubs

Trace past and current movement history of RRPP

Real-time aggregation of billing and payments related to RRPP delivery and return

Provide a transparent accounting system for RRPP suppliers and business operations

Product Traceability Management

ULTRAVIS

Transportaion Lead Time by Route

Inquiry of Product Shipment and Receipt Volumes

Analysis of Logistics Volume by Supply Chain Route

Global Product Traceability

Manage RRPP and products by mapping them as unit loads

Link RRPP with product details such as order numbers and manufacturing lot numbers

Real-time inquiry of actual inbound performance for expected incoming products

Improve efficiency through automatic input of inbound product information

Track the location and movement information of products loaded on RRPP units

# FOLDPAC

**FoldPack** is a reusable, collapsible steel IBC (Intermediate Bulk Container) designed for the efficient transport and storage of liquid products, rubber goods, and small to mid-sized machinery parts. Optimized for loading into ocean containers, it is well-suited for global import and export operations.

- Enhances container loading efficiency by 125% compared to conventional steel IBCs
- Supports product route and history tracking via TRA Platform
- A sustainable, eco-friendly logistics solution based on a pooling system

FOLDPAC	F14	F14H	L-PAC	L-PAC-C
				
Ext(mm)	1465x1150x1098	1465x1150x1098	1220x1120x1080	1220x1120x1120

Applicable Industries	Natural Rubber, Synthetic Rubber	Automotive Products	Liquid Products (Food & Beverage, Liquid Raw Materials)	Liquid Products (Liquid Glucose - For China)

# NESTING DRUM

A nestable, reusable steel drum designed to replace single-use open-top PE/steel drums.

- Specifications**
- Size : D570 X D503 X 990
  - Capacity : 200L (Maximum capacity 210L)
  - Weight : 20kg
  - Material : Steel
  - Cover fastening method : Bolt or clamp
  - Top seal : W-type gasket applied
  - Usage type : Drum+PE liner bag

- Application**
- Suitable for all medium-capacity bulk products regardless of form—liquid, paste, or powder.
- Food and beverage ingredients and finished products
  - Cosmetic and surfactant raw materials and products
  - Silicone and adhesive raw materials and products
  - Others (e.g., tomato paste)

# ST BOX & CombiPAC

**ST BOX and CombiPAC** are returnable packaging solutions—steel cases and corrugated plastic boxes—designed to replace traditional single-use packaging like cardboard boxes for CKD (Completely Knocked Down) automotive parts. Widely used in global operations by companies such as MOBIS, Hyundai Steel, and GM, these solutions support an annual shipment volume of approximately 330,000 units.

	CODE	Outer Dimension			QTY /40ft	Etc.
		Length	Width	Height		
ST BOX (steel)	STB 05	1,480 mm	1,140 mm	550 mm	64 unit	8×2×4
	STB 07	1,480 mm	1,140 mm	730 mm	48 unit	8×2×3
	STB 11	1,480 mm	1,140 mm	1,100 mm	32 unit	8×2×2
	STF 07	1,480 mm	2,260 mm	730 mm	24 unit	8×1×3
	STF 11	1,480 mm	2,260 mm	1100 mm	16 unit	8×1×2
CombiPAC (Corrugated Plastic)	SAB 05	1,480 mm	1,140 mm	550 mm	64 unit	8×2×4
	SAB 07	1,480 mm	1,140 mm	830 mm	48 unit	8×2×3
	SAB 11	1,480 mm	1,140 mm	1250 mm	32 unit	8×2×2

# E-PAC

Based on a thorough analysis of the characteristics of secondary battery products and their supply chains, we offer end-to-end logistics solutions — encompassing the design of optimized logistics equipment, operational analysis, process planning, supply, and execution — to deliver the most effective and efficient logistics strategies.

- We offer end-to-end packaging solutions for secondary battery products, covering the entire process from raw materials to battery cells and packs.
- Rapid testing and validation throughout the entire development process help minimize the time and cost required for certification under international transport packaging regulations. (LogisALL Packaging Innovation Center)
- Over 30 successfully completed projects

# CRATE

## NESTING BOX & COLLAPSIBLE BOX

This plastic box serves as a reusable alternative to single-use cardboard boxes shipped to overseas automotive assembly plants. To enhance return and storage efficiency, it features a foldable design and nesting capability. Currently, we supply approximately 6 million units annually to facilities such as HMM (Hyundai Alabama) and KMMG (Kia Georgia) in the United States.

### NESTING BOX

### COLLAPSIBLE BOX

## COCON BOX

The **COCON Box** is a smart insulated container optimized for fresh food delivery. It is designed to maintain optimal temperatures for freshness during delivery and incorporates hygiene management features to ensure food safety.

### Excellent Insulation Performance

When loaded with refrigerants such as ice packs or dry ice, it maintains optimal refrigerated or frozen temperatures for over 8 to 19 hours.

### Remote Temperature Management System

By tagging the box's NFC sensor with a smartphone, the internal temperature can be measured in real-time and transmitted to a monitoring server.

### Ensuring Food Safety

Antimicrobial treatment provides a 99.9% antibacterial effect against pathogenic bacteria causing food poisoning (antimicrobial efficacy verified by JIS Z 2801 test).

### Outstanding Logistics Efficiency

As a nesting type, the required storage height is reduced to one-third, maximizing space utilization.

## RRCC

The RRCC (Reusable Returnable Collapsible Container) is a multi-use packaging box designed to replace single-use corrugated cardboard boxes. With a minimum of 70 reuse cycles compared to disposable boxes, it reduces packaging costs by 15% and offers an eco-friendly packaging solution that decreases environmental impact by prioritizing reuse over recycling.

### Compatibility with Existing Methods

- Can be used interchangeably with existing cardboard boxes (same specifications)
- Can be applied to existing automated systems

### Built for Long-Term Reuse

- Made of moisture- & water-resistant materials
- Uses printing methods that resist fading or smudging

### Advanced Quality Management System

- Return system integrated through the LogisALL network
- Dedicated RRCC cleaning system designed to reduce water consumption

### Smart IoT Asset Management

- Utilizes RFID to manage inventory and turnover days
- Can be used as an objective indicator to support carbon neutrality efforts

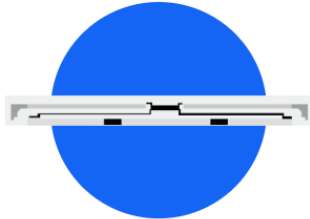

## FOLDCON

This is a foldable maritime container designed to maximize space efficiency. While maintaining the same dimensions as standard containers, it folds down to one-quarter of its volume, enabling cost-effective and eco-friendly transportation of empty containers.

- 4x the transport and storage capacity of empty containers
- Enables just-in-time supply and reduces turnaround time for empty containers
- 4x transport load capacity reduces the number of vehicles required, thereby lowering carbon emissions.
