**GGG ANTI-DRONE AMMUNITION
.223 REM | .308 WIN**

Project Overview

GGG factory has developed and manufactured anti-drone ammunition designed for effective engagement of small and medium-sized drones.

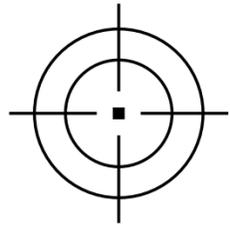

Currently available calibers:

- .223 REM
- .308 WIN

The product has been developed in response to modern security challenges and real operational requirements.

Testing Program

GGG anti-drone ammunition was thoroughly tested both at the shooting range and under field conditions.

Testing locations:

- GGG shooting range
- Military training area, in cooperation with the Lithuanian Armed Forces

Shooting Range Test Results

At the shooting range, the following parameters were evaluated:

- Ammunition dispersion at various distances
- Penetration characteristics

The tests demonstrated consistent performance, reliability, and high effectiveness.

Field Tests with Drones

Live field tests were conducted against drones:

- Evaluation of ammunition effectiveness against aerial targets
- Assessment of drone functionality loss after impact

Results:

- Drones were successfully neutralized
- Neutralized drones lost their operational capability

The results are assessed as highly positive.

Production Capacity

Mass production starts in March.

Planned production volume for this year:

- 1,500,000 rounds – .223 REM
- 500,000 rounds – .308 WIN

In case of increased market demand:

- Possibility to operate in two shifts
- Corresponding increase in production capacity

Pricing

GGG anti-drone ammunition pricing (EXW):

- .223 REM – EUR 2,200 / 1,000 rds
(M2A1 metal box packing)
- .308 WIN – EUR 2,400 / 1,000 rds
(M2A1 metal box packing)
