RESILIENCE CYCLE / PRODUCT SHEET

TABLE TOP X

INCIDENT READINESS

Test your response before a real cyberattack does

When a cyberattack hits, minutes and team response matter.
TableTop X verifies organizational readiness through realistic, AI-powered crisis scenarios before a real incident puts people, processes and decisions under pressure.

TableTop X is a cloud-based platform for AI-powered cybersecurity tabletop exercises. It helps organizations simulate realistic incidents such as ransomware, phishing and data breaches, test cross-functional response under pressure and turn each exercise into concrete lessons and improvement actions.

3 reasons this product stands out

1 Dynamic AI-powered exercises with live injects

TTX generates realistic cyber incident scenarios and lets facilitators introduce new events as the situation evolves.Teams must adapt to unexpected developments and make decisions under pressure.

2 Repeatable readiness across IT, OT and business

Role-based exercises support executive, operational and technical teams across IT and OT environments. Automated setup makes readiness testing practical to run regularly, not just once.

3 From decisions to measurable improvement

TTX goes beyond discussion by testing decisions and consequences, exposing gaps and turning every exercise into a structured report with recommendations and actionable next steps.

How it works

Scenario → Injection → Decision → Consequence → Improvement

Facilitators can introduce technical failures, human factors and external pressures as the scenario evolves. After the exercise, TTX produces analysis, recommendations and actionable tasks.

Built for real-world readiness

Executive teams
Test strategic decisions, stakeholder management and crisis communication.

Operational teams
Practice cross-functional coordination and business continuity.

Technical teams
Validate incident response, containment and recovery.

IT & OT environments
Run scenarios that reflect different operational and technology contexts.

SCENARIOS / CAPABILITIES

AI-powered | Ransomware | Phishing | Data breach | IT / OT | Live injects

What you can test

- Cyber incident readiness
- Incident response and recovery plans
- Decision-making under pressure
- Cross-functional coordination
- Crisis communication
- Organizational resilience
- Readiness gaps and improvement priorities

Repeatable preparedness over time

TableTOP X is backed by the experience of GAMO, a Slovak technology company specializing in cybersecurity services, software development and professional cloud solutions. For over 35 years, GAMO has been helping organizations strengthen and modernize their IT environments.

Don't assume your incident response plan will work. Test it.
