your business
wireless

- IoT Network Solutions
- Embedded IoT Solutions
- Distribution

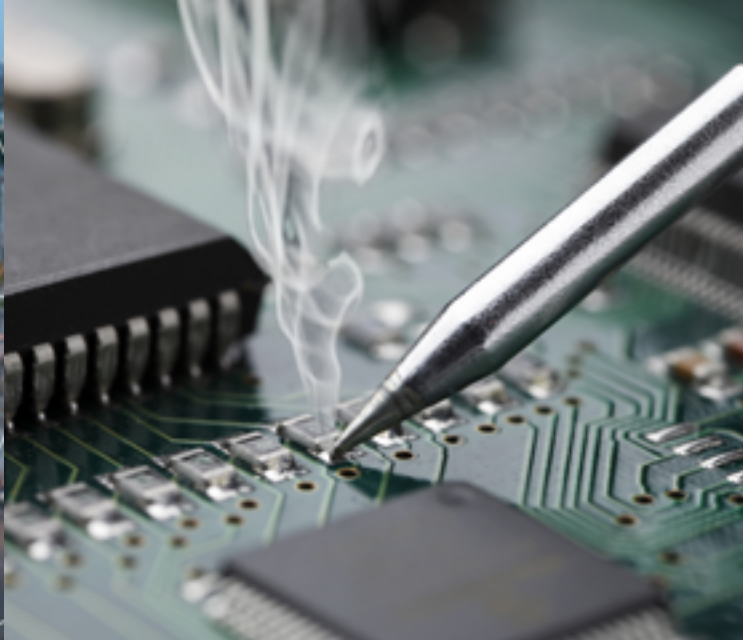

IOT NETWORK SOLUTIONS

Our systems integrators design and configure IT systems to meet your exact needs. We provide detailed advice and work closely with you.

If necessary, we will develop something new for you or use high-quality industrial equipment, systems and components from well-known manufacturers.

Our aim is to integrate the new system as quickly and easily as possible. We always keep an eye on the budget and will tell you clearly if something is not feasible.

EMBEDDED IOT SOLUTIONS

Do you want to make your product IoT-enabled?
Do you want to manage it centrally and read out important data wirelessly or control functions and updates remotely?

If so, let us assist you in starting your IoT project. Work with us to save time and money during development.

We operate B2B and adapt cross-industry experiences to serve as a service provider to the industry, supporting you from brainstorming to certification.

DISTRIBUTION

As a value-added distributor, we do not limit our offerings to products from renowned manufacturers or mere comprehensive advice.

Instead, we painstakingly collaborate with you to construct or create your bespoke IoT solution.

Additionally, we provide an array of technical services, including design reviews, flash services for modules and devices, after-sales support, and more.
