

# B303

## Classic Heavy Duty Pruner

Professional Series

### B303

Weight : 9.2oz (260g)  
Size : 8 1/4" (21cm)  
Blade Length : 2 1/4" (55mm)  
Cut Diameter : 1" (25mm)  
UPC: 7-57735-01994-3

- High carbon sword steel blade and anvil, precision ground, with secure 3 pin positioning, grants the pruning tool's SUPERIOR cutting edge.
- Deep anvil sap groove, cleans the blade after each cut.
- Wire cutting notch, cuts soft wire in floral arrangements or vineyard ties.
- Fine adjustment blade tensioning system, to fine tune the pressure of the blade against the anvil for long term optimum severance of fibers and capillary.
- Needle bearing in the self-oiler bolt (patent pending) helps to practically eliminate friction.
- Drop forged aluminum body and handles, light weight, yet super strong to support large cuts
- Anodize finish, repels dirt, sap and fluids
- Vinyl coating of handles, for easier handling of the pruner.
- Two-Position-Lock (classic mount) for smaller handle spread to reduce fatigue during operation of pruner  
Note: 70% of all cuts are smaller in diameter and do not require full opening of the pruning jaws.  
Excellent for people with smaller hands, yet with a flick of the lock full opening of the jaws is granted to tackle larger cuts.
- Center Oiler Bolt Technology, allows for maintenance of the tool without taking it apart. It provides continuous lubrication during the operation of the tool.
- Durable rolled European style "barrel" spring.
- A full spare parts program is available for this tool.

Application: Vineyards, Orchards, Nurseries, Landscaping, Professional/Recreational Gardening
