TEAL

Cloud Assessment
Ensuring Access and Identity Security

Data breaches due to credential abuse is the biggest threat for cloud usage

- ISACA

Our cloud assessment will help you, if you...

strive to analyse your status quo in detail
need to identify the right measures
need to comply with regulatory processes
require proof of implemented measures
need to determine the next steps after a ransomware incident

As a part of the cloud assessment, you will receive...

an intensive know-how transfer

a comprehensive analysis of your Azure tenant, especially with regard to Identity & Access Management, Endpoint Security and Threat Detection, which scrutinizes your strategy, governance and configurations

a detailed final report containing a risk analysis and a recommendation for suitable measures based on this analysis

The cloud assessment enables you to make informed decisions to plan and effectively implement your next steps on a solid, risk-aware basis.
