VECTOR-FOOD[®]
NATURAL CHEWS FOR DOGS

Something about us ...

Experience, knowledge and respect-these are the strongest features of Vector Food. We have building our position on the domestic and European market for over 30 years, enjoying a good reputation. The trust that more and more contractors give us seems to confirm our belief in the high quality of our products. The satisfaction of our customers is our greatest success.

As a manufacturer, we have a great pleasure to participate in the process of creating the best healthy dog treats. New nutritional trends allow us to constantly expand our offer. We still improve our production lines, focusing on maximising product quality. From our long experience, we know that animal protein constitutes the basic building material for dogs.

The main asset of Vector Food it's being a family business. We constantly care about the high quality of our products and the good name of our brand. We discuss new ideas together and innovate our production technologies. Our young staff makes sure that the company develops in new directions and stays in line with the requirements of the modern market.

For over 30 years, Vector Food has stood for the highest quality of natural dogchews. Strict hygiene control of the plant, our staff and the production process are an integral part of the implemented and maintained quality standards.

Inspired by the nutritional needs of our four legged friends, we have developed a special technology, thanks to which our dogs treats retain all the nutrients, vitamins, amino acids and microelements which are necessary for the proper functioning of a dog organism.

made with love

Behind every brand stays people.
We provide high quality people services and we are always ready to support our customers with our knowledge and experience

responsibility, loyalty, fairness, innovation, natural, ecological, good, tasty, fresh, high qualitative, healthy, reliable, simple, unique

everything in one place

VECTOR-FOOD[®]
NATURAL CHEWS FOR DOGS

Simple the best ...

... only single proteins made of:

RABBIT

Rabbit meat is a valuable source of easily digestible protein with a very low fat content, it contains a lot of unsaturated linolenic acid, which has anti-inflammatory, antioxidant and analgesic properties. They are also a treasure trove of amino acids and B vitamins necessary for the proper functioning of neurons.

DUCK

The meat of these birds is rich in unsaturated fatty acids. These substances have a significant impact on the health of the entire body, in particular on the proper functioning of the cardiovascular and nervous systems.

GOOSE

Goose meat is rich in essential nutrients such as protein, iron, zinc, phosphorus, and B vitamins (especially niacin and riboflavin). It's also lower in fat compared to other meats like beef or pork.

TURKEY

Turkey combines both 70% white meat and 30% dark meat, and is both high in protein and low in fat (except for the skin). It is a good source of iron, zinc, potassium and phosphorus and contains vitamin B6 and niacin.

BEEF

This type of meat is a good choice for the production of natural delicacies and should be targeted at active dogs, as it has a positive effect on metabolism and regeneration after exercise.

Beef is a species rich in easily digestible iron and a number of B vitamins (B12, B3 and B6), A and E, as well as zinc and selenium.

PORK

Pork is rich in protein, B vitamins, iron, selenium, zinc and phosphorus. However, it is one of the fattier meats, so it is recommended for active, working and younger dogs. Pork rarely causes allergies - so it may be a solution if your dog suffers from food intolerance or allergy.

CHICKEN

The advantages of chicken chews are their low caloric value and high protein content. Chicken is a high-value type of meat and you can easily introduce chicken delicacies as a supplement to your dog's balanced diet.

GAME

Due to the fact that animals are very active in the wild, venison is lean meat and has excellent blood supply - making it an ideal choice for dogs that must be fed with low-calorie food or treats that are rich in vitamins and minerals.

LAMB

Delicate lamb meat contains L-carnitine, which increases the body's efficiency and helps maintain proper body weight, as well as orotic acid, which has anti-cancer properties. This type of chews contains 30 times more of it than, for example, pork or poultry.

FISH

Fish chews for dogs provide omega-3 fatty acids (ALA, DHA and EPA), polyunsaturated fatty acids that influence the immune system, improve the functioning of the circulatory system, support the aerobic capacity of muscles, and support the functioning of the brain and heart.

RABBIT PRODUCTS

One of the best proteins for dogs

Rabbit chews are a valuable source of easily digestible protein with a very low fat content. They contain a lot of unsaturated linolenic acid, which has anti-inflammatory, antioxidant and analgesic properties, and also has a great impact on the condition of the skin and reduces the risk of serious cardiovascular diseases. They are also a treasure trove of amino acids and B vitamins necessary for the proper functioning of neurons.

Compared to other varieties of animal products, dried rabbit delicacies are distinguished not only by the favorable structure of macronutrients (proteins, fats and carbohydrates), but also by their quality. The proteins it contains belong to the so-called alternative proteins that are less likely to cause allergic reactions. Fats are polyunsaturated, providing your dog with shiny coat and lubrication of joints. Natural rabbit chews also contain easily digestible iron salts and phosphorus, which provide the animal with strong teeth and bones.

Main advantages

100% rabbit material

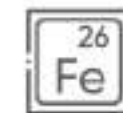

100% natural

hypoallergenic

low fat

source of iron

source of phosphorus

source of vitamin B

source of protein

removes tartar

Ash	1%	

RABBIT SKIN WITH HAIR 40, 30, 20, 15 cm

It is relatively soft and contains a large amount of protein. The hair left on the skin is extremely useful in the process of intestinal cleansing, as a preventive measure against worms in the dog's digestive system.

Typical analysis:		Type of package
Protein	67,2%	1000g
Fat	25,1%	long - 50 pcs
Fiber	1,5%	wrapped 30cm - 100 pcs
Ash	1,3%	wrapped 40cm - 50 pcs
		customized

BEEF PRODUCTS

Beef chews for dogs – can they be given?

Beef is a noble type of meat with a beautiful red color, which is due to, among others, favorable proportion of fat and protein. Although it contains little of the former, half of it is healthy, unsaturated fatty acids. This type of meat is a good choice for the production of natural delicacies and should be targeted at active dogs, as it has a positive effect on metabolism and regeneration after exercise.

Compared to other types of meat, beef is rich in high-quality and easily digestible protein, which is essential for the body of young dogs. It has a positive effect on his bones and the appearance of his skin. Therefore, supplementing the diet with beef chews for puppies is recommended in the initial phase of development of small breed dogs.

However, it is worth remembering that young dogs do not have developed teeth. As a result, they are weaker, so they may not be able to cope with harder elements, such as bones, while dried beef lungs or dried beef will be perfect.

Main advantages

100% beef material

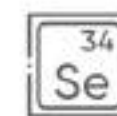

100% natural

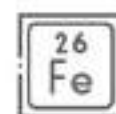

low fat

source of protein

source of selenium

source of iron

source of zinc

source of vitamin B

source of vitamin A, E

removes tartar

for shiny fur

grain free

BUFFALO STICKS

PORK PRODUCTS

We associate pork with fatty meat and high cholesterol content, right?

It turns out that specialized pig breeding means that the meat is no longer as fatty and contains a similar cholesterol content to that of poultry. Pork is also characterized by high variability in protein and fat content, depending on the part of the carcass. Fattier items, such as dried middle ear or pork tail, will contain less protein. Lean parts, such as dried pig ears or intestines (spaghetti), will be rich in them. Pork is a valuable source of polyunsaturated fatty acids, which are necessary for the proper functioning of dogs' bodies. It is also a valuable source of B and E vitamins.

Pork is not as widely used in pet chews but it's rich in protein, B vitamins, iron, selenium, zinc and phosphorus. However, it is one of the fattier meats, so it is recommended for active, working and younger dogs. Pork rarely causes allergies - so it may be a solution if your dog suffers from food intolerance or allergy.

POULTRY PRODUCTS

Poultry – low caloric value and high protein content

Poultry meat is an excellent source of protein, unsaturated fatty acids, vitamins and minerals. They are characterized by a relatively low content of collagen and elastin, which are the main components of connective tissue (the share of collagen in poultry breast muscles is 2.5%, in thigh muscles – 6%, pork meat contains approx. 16%, and beef – 13% collagen). Moreover, compared to meat from other animal species, poultry has a lower amount of fat and a more favorable ratio of unsaturated to saturated fatty acids.

Duck dog chews contain a higher amount of fat and are also higher in calories. Omega-3 fatty acids have a positive effect on the animal's circulatory and nervous systems, while vitamins B1 and B6 contribute to the proper development of bones and take part in the process of protein and fat metabolism in the body.

Turkey chews are rich in minerals and vitamins that are necessary for proper functioning, such as potassium, zinc, B vitamins and iron.

Not only are they a very aromatic and crunchy snack, but they also contain a lot of minerals and other equally helpful nutrients such as zinc, selenium, magnesium and phosphorus.

Typical analysis:		Type of package
Protein	42,8%	10 000g
Fat	17,8%	1000g
Fiber	<2%	500g
Ash	10,3%	customized

GOOSE NECK

A treasure trove of nutrients such as phosphorus, iron, B vitamins and DHA, the latter of which make the chew relatively high in calories and therefore intended for active dogs.

Typical analysis:		Type of package
Protein	69%	5000g
Fat	23%	1000g
Fiber	0,7%	500g
Ash	3,7%	customized

GAME PRODUCTS

An ideal choice for dogs that need to be fed with low-calorie food or treats

Game meat is an excellent choice for owners who want to manage food allergies. It is an easily digestible source of organic protein. It is a valuable source of iron, an essential element that includes, among others: component of hemoglobin. The presence of vitamins in venison, low fat and cholesterol content help keep the dog's energy at a good level. Venison also contains high levels of thiamine, riboflavin, vitamin B12, niacin and zinc. It is therefore a very nutrient-rich source of protein and is perfect for feeding any dog.

Game is rich in magnesium, phosphorus, calcium, iron and B vitamins - B2, B5, B6. All these ingredients influence the proper functioning of all systems - especially the nervous one. High iron content is especially recommended in the diet of dogs that are prone to anemia.

LAMB PRODUCTS

A unique delicacy ...

Although it may seem surprising, lamb chews are an excellent source of unsaturated fatty acids. Many people think that oily fish has this advantage. Meanwhile, lamb fat contains polyunsaturated fatty acids with a good n-3 to n-6 ratio, the most beneficial for dogs. Lamb is a slightly forgotten species, which is rich in a number of substances that are extremely valuable for the body, and is used to make dog chews.

Lamb is usually a fatty meat, but may be great for active/working dogs or those that need to gain weight, and is therefore less suitable for overweight or older dogs. This meat is rich in vitamins B12 and B3, Omega 3 and Omega 6 acids, as well as selenium, zinc, iron and phosphorus.

Lamb treats are especially recommended for dogs with food allergies. The properties of this species depend on the lifestyle and method of feeding the lambs, which eat mainly milk, grass or green fodder and freely roam pastures, most of which are located in ecologically clean regions.

Main advantages

100% lamb material

FISH PRODUCTS

Which fish chews are best for a dog?

Fish chews are a valuable component of a dog's diet. Easily digestible fish protein is of high quality and is among the least allergenic food products.

Are a rich source of:

omega-3 acids, which influence the immune system, improve the functioning of the circulatory system, support the aerobic capacity of muscles, support the functioning of the brain and heart, have a beneficial effect on eyesight, support learning and memory processes and have anti-inflammatory properties;

selenium, which protects the dog's body against toxic elements, such as mercury, cadmium, lead. It has a beneficial effect on the metabolism of thyroid hormones;

iodine, which participates in the differentiation, growth and development of cells in young animals and the regulation of metabolism in adult dogs

and **vitamins A, D, E, B**

Oily saltwater fish are generally considered to be the most valuable because of their large amounts of polyunsaturated fatty acids. If you give your dog fish, make sure it comes from a good source. Sardinella or cod skin will be a good choice especially for puppies.
