

# KALOX

**Your Specialist in Camera-Based  
Refrigerant Leak Detection**

**Making the invisible visible!**

# The Technology

At KALOX, we use cameras equipped with highly sensitive infrared sensors for the precise detection of refrigerant leaks. By analyzing thermal radiation, gas molecules are visualized in real time as colored clouds. This technology enables the detection of even the smallest refrigerant concentrations across various types of refrigerants.

Detection on evaporator from approx.  
7 m distance

## Our Service: Precise Refrigerant Leak Detection

- Early Leak Detection: Minimize refrigerant losses and operating costs
- Rapid Response Times: Reduce downtime for your systems
- Comprehensive Video Documentation: Effortlessly meet regulatory requirements

Detection on refrigerated wall  
cabinet during operation

# Your Advantages with KALOX

- Use of state-of-the-art refrigerant detector cameras
- Fast and precise leak localization
- Support for your team – we deliver the results, you focus on the repair

Detection at height underneath insulation
