

PROTECTING DATA SINCE 1969

PORTFOLIO OVERVIEW 2026

Solutions for Backup, Data Management and Cyber Resilience

01

PRODUCTS & SOLUTIONS

6 building blocks for backup, recovery and data management

02

RECOVERY & ARCHIVE

Recovery, archiving and secure data erasure

03

MANAGED SERVICES

SOC, Jumpstart Retainer and Migration Services

04

PROFESSIONAL SERVICES

Managed backup and consulting along the roadmap

PRODUCTS & SOLUTIONS

1

CBS Multi-Engine

The CBS Multi-Engine is a highly available, hyperconverged backup platform that unifies multiple backup engines in one central solution. It enables a smart transition from legacy products to modern, integrated cyber recovery systems. All components – compute, storage, networking and software – work together in a single cluster. With the pay-per-use model, organisations only pay for the capacity they use and benefit from maximum flexibility, compliance assurance and efficiency.

2

Automated Recovery Testing

The Cristie Resilience Booster combines automated recovery orchestration, bare-metal recovery and recovery assurance in one platform – for fast, consistent recovery of individual systems or entire environments after ransomware attacks, infrastructure failures or large-scale outages. Operating systems, applications, configurations and data are restored from trusted backups – without any manual rebuild. The integrated Continuous Recovery Assurance automatically tests after every completed backup whether recovery works, so systems are proven to be recoverable before an emergency occurs.

3

Multi-SaaS Backup

Multi-SaaS Backup protects Microsoft 365, Google Workspace, Salesforce and other cloud services in compliance with the GDPR. Data is backed up daily, can be restored granularly and is stored in European data centres. The usage-based model offers maximum flexibility with no contractual lock-in, so organisations retain full control over their SaaS data.

4

Data Management

Cristie Data provides a central solution for effective data management across the entire lifecycle. Organisations gain transparency over data classification, storage and governance. Compliance requirements can be met reliably and storage resources optimised in a targeted way. The result: more control, less complexity.

5

Green S3 Cloud (Backup & Archive)

Green S3 Cloud is our CO₂-neutral storage solution for sustainable backup and archiving strategies. Operated in data centres located in wind turbines, it combines environmental responsibility with state-of-the-art security. S3 compatibility enables seamless integration into hybrid infrastructures. Ideal for organisations that value sustainability and high availability.

6

Replication, Migration – CloneManager

This solution simplifies system, data and data centre migrations through automated replication processes. CloneManager creates consistent copies of systems and reduces risk during relocations or upgrades. This makes the move to new platforms safe and efficient. Organisations benefit from high data integrity and minimal downtime.

SYSTEM RECOVERY & ARCHIVING

System Recovery

System Recovery enables the complete restoration of systems – from the operating system to applications. Whether physical, virtual or in the cloud: outages are resolved in the shortest possible time. Automated tests verify that every recovery works. This keeps your business operations protected, even in an emergency. Our recovery software integrates directly with the backup solutions from Cohesity, Rubrik, IBM and Dell Technologies.

Data Archiving & Secure Erasure

Cristie Data offers a holistic approach to long-term data retention and management. By combining tape-based archiving, secure media handling and certified data erasure, compliance, security and sustainability are ensured. Organisations can store, retrieve and erase data in an audit-proof manner – with full evidence and minimal effort. One solution for archiving and erasure in line with regulatory requirements.

MANAGED SERVICES

01

MANAGED SOC

Cristie Data provides a fully managed Security Operations Center (SOC) with 24/7 monitoring, threat detection and incident response. The service strengthens organisations' security posture through continuous visibility and proactive defence. Regular reports and expert analyses help to detect and minimise risks at an early stage – for lasting cyber resilience.

02

JUMPSTART RETAINER

The Jumpstart Retainer offers a fast entry into managed SOC services. With clearly defined SLAs, preconfigured integrations and immediate operational readiness, cyber resilience is achieved within a few days. Ideal for organisations that want to build up their security operations efficiently.

03

MIGRATION SERVICES

Cristie Data supports organisations with infrastructure and cloud migrations – from analysis and planning through to validation. Standardised methods reduce project risks and shorten cutover times. This ensures a smooth and secure transition to modern IT environments.

PROFESSIONAL SERVICES & MANAGED BACKUP

Managed Backup

With Managed Backup, Cristie takes over the entire backup operation – including monitoring, troubleshooting and SLA-based performance. Organisations save resources and gain planning certainty. The backup system remains available and reliable at all times, without any internal effort.

Professional Services

Cristie Data offers tailored consulting and implementation services for backup, data management and IT resilience. Projects are supported end to end, from strategy development to operational implementation. The goal: a stable, auditable and future-proof IT architecture.

Cybersecurity and data protection solutions on a flexible monthly subscription.
Say goodbye to high IT investments.
