ARKA

*my*SCAPE

CO₂ SYSTEM

2,4 L & 3,7 L

The **ARKA® myScape-CO₂ system** enables CO₂ to be effectively, affordably and consistently supplied to every freshwater aquarium. A special acid-base mixture (citric acid and baking soda/sodium bicarbonate) and water are placed in the high-quality and pressure-resistant stainless steel cylinder – this mixture reacts inside the cylinder to form CO₂.

**Citric acid + Baking soda
+ Water = CO₂**

This means the **ARKA® myScape-CO₂ system** can be quickly and effortlessly re-filled at home.

What makes the ARKA® myScape-CO₂ system so special?

- Do it yourself – can be filled/re-filled yourself
- The main components are made from high-quality stainless steel to ensure resistance to corrosion and pressure
- Efficient, long-lasting and reliable
- Easy to use
- Precise setting options
- Safety valve to release excess pressure
- Night-time switch off possible thanks to solenoid valve
