

DUTCHPACKS

Solutions for the packaging industry

At Dutchpacks, we provide more than mere machinery for the packaging industry; we serve as your dependable partner in enhancing production processes. Whether you seek advanced technologies or more straightforward solutions, we offer the ideal option for every budget.

With a strong emphasis on **small and medium-sized enterprises**, we provide machines that are perfectly suited for **processing 10 to 300 pieces per minute**. We specialize in sealing cans and cardboard tubes, featuring our own innovative, energy-efficient, and cost-effective machines.

Our latest innovation is **the heat seal machine**, designed to apply cardboard bases onto cardboard tubes. This machine incorporates **4.0 technology**, significantly minimizing downtime. The changeover time for adjusting to a different height is **only 5 minutes**, while a complete adjustment to a different diameter can be accomplished **within 30 minutes**. **The quick release system** facilitates rapid tool changes, and the automatic height adjustment enhances production flexibility and efficiency. Additionally, the machine's minimal environmental impact supports a sustainable solution that benefits both your production processes and our planet.

The sales of our machines are managed by our experts, **Michel Thomas** and **Mike van Esch**. They are eager to collaborate with you to identify the optimal solution for your company.

We warmly invite you to a personal meeting at our location, where we can discuss how our solutions can enhance your business over a cup of coffee. If it is more convenient, we are also happy to visit you at no obligation. Please inform us of your preference, and let us explore the possibilities together!
