

Reliable performance for every sweeping task

Durable and versatile, Sajas brush rings deliver outstanding sweeping and cleaning results across a wide range of industrial applications. Their high bristle density ensures consistent performance and long service life, while straight or wave-shaped patterns optimise cleaning results for each task.

Available with **plastic or steel bodies** and a variety of **bristle materials**, every brush ring can be tailored to your needs.

Our **fully plastic brush rings**, made with our own *Finalon®* fibre, combine exceptional wear resistance with sustainability. They are **100% recyclable** and available in **custom colours, locking pin designs, and filament thicknesses**.

Key benefits

- **Advanced design:** A pioneer in fully plastic, fully recyclable brush rings.
- **Proven performance:** Engineered for effective and efficient sweeping.
- **Durable:** High-quality materials ensure long service life.
- **Customisable:** Options for materials, shapes, filament thicknesses, colours, and locking systems, including special models such as animal brushes.
- **Optimised logistics:** UV-protected materials and waterproof packaging make handling and storage easy and cost-efficient.

Sajas brush rings

Lasting performance for sweeping,
cleaning, and industrial applications

sajasgroup.com

Choose the best model for your needs

We offer three brush ring models, each designed for specific sweeping applications.

Beeline®

Convoluted brush ring

The world's first all-plastic, fully recyclable convoluted brush ring. Made entirely of polypropylene, it delivers a service life up to 40% longer thanks to its unique wave-shaped design.

Sunline™

Flat brush ring

A reliable all-rounder for consistent, efficient sweeping across various applications.

Starline™

Conical brush ring

Designed for tight spaces and corners, also used for engine protection when the motor sits in the middle of the core.

Beeline®

The benchmark in durability

Beeline's unique convoluted design provides at least **40% longer lifespan** than conventional flat rings; in real-world use, up to **100 hours vs. 50**.

- **Enhanced sweeping precision:** the wave shape ensures uniform contact and eliminates striping.
- **Ideal for collecting sweepers:** maintains steady performance even in head-on sweeping.
- **Optimised cup-shaped cavities:** improve debris lift and throw, both dry and wet.
- **Superior material retention:** prevents fine dust and litter from passing through.

Next-generation Beeline®

With 30 years of proven performance behind it, **the new Beeline®** builds on everything users already trust: reliability, durability, full recyclability, and compatibility – and makes it even better.

What's new

- A refined smooth wave shape for **improved structural integrity** and **easier handling**.
- Redesigned body for **more efficient stacking and packaging**.
- Upgraded locking pin design for **faster installation, stronger structure**, and **wider machine compatibility**.
- Option to **add your own logo** on the ring.
- All pin solutions available in both **standard** and **high** versions.

Our sales and design teams are happy to support you with standard or customised solutions for any sweeper brand. Read more!
