

FOR IMMEDIATE RELEASE

Recover Tactical Launches the S-PRO: The Next Generation in Pistol Stabilizers

Recover Tactical is proud to announce the release of the S-PRO, a cutting-edge pistol chassis system designed to revolutionize the pistol conversion kit market. Building on the success of the 20/20 platform, the S-PRO takes performance, functionality, and compatibility to the next level.

“The S-PRO was designed to give firearm enthusiasts the freedom to customize and adapt their stabilizer without being locked into a single frame,” said Tamir Porat, designer of the Tavor rifle, and chief designer at Recover Tactical. “Our goal was to create a stabilizer that combines cutting-edge functionality with unparalleled versatility, and we’re thrilled to deliver a product that meets the needs of today’s firearm enthusiasts. The S-PRO’s modularity and ease of use set a new standard in the market, and we’re excited to see how our customers customize and utilize this platform.”

Key Features of the S-PRO:

- **Spring-Loaded Pistol Brace or Stock:** Deploys with the push of a button for rapid use. An industry first to ship with both options included.
- **M-LOK Mounting Options:** Allows for seamless attachment of accessories such as lights, lasers, and optics.
- **Broad Compatibility:** Modular design supports multiple pistol models all based on the same base unit, starting with Glock compatibility and expanding to SIG X Macro, Canik, and Walther PDP models soon after launch. Simply swap out the adapters and keep the original platform. Recover will be adding more fun fits monthly based on customer demand.

The S-PRO is available in two configurations:

1. **Basic Kit:** Includes the frame, spring-loaded brace, front locking piece, charging handle, and an adapter for your pistol.
2. **MG Kit:** Adds a forward mag grip, adjustable cheek riser, and a durable metal M-LOK rail for optics.

Modular, User-Friendly Design The S-PRO’s innovative design allows users to attach their pistol to the stabilizer in under 5 seconds without tools. Key features include:

- A spring-loaded brace that deploys effortlessly.
- A forward mag grip and adjustable cheek riser for optimal comfort and control.
- Full support for suppressors, compensators, and slide-mounted optics.
- No modifications required to your pistol for installation.

The adjustable cheek riser works in tandem with the upper metal rail, ensuring precise eye alignment. For users with slide-mounted optics the cheek riser is not necessary. Whether using the brace or stock configuration, the S-PRO delivers superior ergonomics and modularity.

Seamless Pistol Compatibility The S-PRO is engineered to be compatible with a wide range of Glock pistols, with additional models to follow. For Glock owners, here's a detailed breakdown of compatibility:

- **Fully Compatible with All Generations:** G17, G19, G19X, G24, G25, G26*, G31, G32, G34, G45, G47, G49
- **Fully Compatible with All Generations Except Gen 5 Slides:** G22, G23, G24, G27*, G35

*Please note: The charging handle is not compatible with RTF "Moon Cut" slides. For Gen 5 models of G22, G23, G24, G27, and G35, users will require an alternative method for racking the slide, such as an RMR or similar solution.

Pre-Order and Availability The S-PRO is now available for pre-order in both brace and stock configurations. All unit's ship in brace configuration. Shipping at the beginning of March for Glock models. Recover Tactical is committed to providing modular adapters for future pistol compatibility, ensuring the S-PRO remains the most versatile and user-friendly pistol stabilizer on the market.
