## Fom Group at Fensterbau Frontale 2026: One Stop Supply for the Future of Window Manufacturing

At the upcoming edition of Fensterbau Frontale, Fom Group confirms its position as the **single most comprehensive address to visit** for window and door manufacturers seeking a complete, integrated supply of technologies. The Group unites the strengths of **Fom, ProfteQ, Dubus, Comall, and FST**, delivering a seamless and fully coordinated workflow—from profile processing to software-driven production management.

Fom Group will place special focus on **PVC machining**, an area where the Group's solutions have become benchmarks for efficiency, and reliability. In addition, the Group will showcase technologies designed for **hybrid PVC–aluminum profiles**, emphasizing full operational flexibility and the capability to support evolving material trends.

Unlike systems dependent on heavy customization, FOM Group's machines are **natively engineered for adaptability**. Each solution is conceived from the outset to meet real production needs, following a development philosophy rooted in listening to customers and translating their requirements into robust, scalable engineering.

Once again Fensterbau Frontale becomes the perfect stage to present the Group's **multi-brand and multi-material portfolio**, offering manufacturers an unmatched range of machines, software, and integrated capabilities. Whether the objective is to increase productivity, embrace hybrid materials, or accelerate digital transformation, visitors will find **all solutions in one place: FOM Group**.

**FOM: One Group. Every Solution.**
