

# Self-hosted password manager for your business

Passwork offers the advantage of effective teamwork with corporate passwords and secrets in a totally safe environment. Employees can quickly access all their passwords, while the rights and actions are closely supervised and managed by your company.

## Made in Europe

Developed in Europe, ensuring full GDPR compliance and data sovereignty

## ISO 27001 certified

All development and infrastructure practices meet the highest security standards

## Government-trusted

Chosen by government agencies and highly regulated organizations across Europe

## Security verified by HackerOne

Our security has been audited by a global leader in IT penetration testing

## Enterprise-grade protection

On-premise deployment means your passwords never leave your infrastructure

## 30% lower long term cost

Independent research shows 30% savings compared to competitors

**Designed for simplicity. Trusted for security.**  
**Chosen for true partnership.**

### Simplicity

Passwork makes security intuitive: easy onboarding, no training required. Seamless UX keeps your team focused on work, not passwords.

### Reliability

ISO 27001 certified and HackerOne-tested, Passwork meets the highest security standards. Available as a fully isolated on-premise solution.

### Efficiency

Cut costs by up to 30% compared to competitors, with industry-leading TCO and multi-year plans that deliver more value — without lock-in.

### Flexibility

From 10 to 30,000+ users, Passwork adapts to any workflow or security need — flexible, scalable, and easy to grow with your business.

# Trusted by businesses worldwide

Excellent password manager, especially for those who value control and security

Our team quickly finds its way around because everything is intuitive to use

Well-designed and easy-to-manage password manager that fits well into our enterprise environment

It's so intuitive, that none of the users had any further questions after the initial introduction to the software

## What Passwork offers

### Unified ecosystem

Comprehensive tools for password sharing, secrets management, RBAC, and real-time auditing.

### Secure architecture

Zero-knowledge design with AES-256 encryption keeps passwords within your infrastructure.

### On-premise deployment

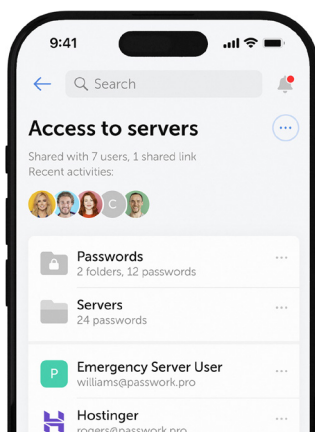

Self-hosted solution provides complete data and infrastructure control.

### Seamless integration

API enables smooth integration with existing services and DevOps processes.

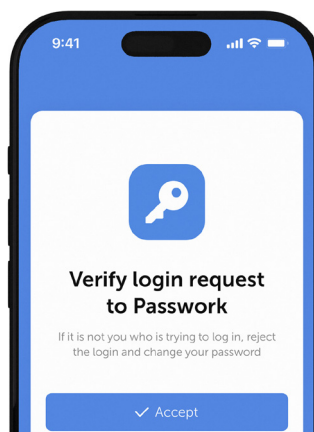

### Mobile app

Quick access to your passwords on mobile devices

### Passwork 2FA

Secure and streamlined authentication

### Browser extension

Autofill and manage your passwords in just a few clicks
