

## **Heripack packaging machines at Fachpack 2024: The HVR automated void reduce system for e-commerce**

*Meschede, 17.09.2024* - At **Fachpack 2024**, which takes place from 24 to 26 September, Heripack Packaging Machines will be presenting its new HVR volume reducer in Hall 1, Stand 1-226. This newly developed machine type is specially tailored to the requirements of e-commerce shipping and offers an advanced solution for optimising pack volume.

The HVR volume reducer minimises the empty volume in shipping cartons by specifically avoiding voids. This leads to better space utilisation and significant cost savings.

### **Main features of the HVR automated void reduce system:**

- **Innovative cutting system:** Robust design for high reliability and a long service life.
- **Efficient process optimisation:** Precise volume reduction to improve packaging efficiency.
- **Environmentally friendly:** Reduces material consumption and shipping costs and supports sustainable packaging solutions.
- **Compact design:** In-line system with operation and loading from one side only.

With the HVR automated void reduce system, Heripack presents an advanced technology that helps companies to make their shipping processes both more cost-efficient and more environmentally friendly.

Visit Heripack at Fachpack 2024 and discover how the HVR volume reducer can optimise your packaging processes.
