HACKTHEBOX

CYBER READINESS SOLUTIONS

For Enterprises

HTB provides solutions and use cases that are not just gamified skills development. It's threat readiness, mapped and measurable to critical security metrics.

Trusted by Fortune100 enterprises, global insurers, manufacturers, and defense agencies

Capital One AIRBUS LLOYDS NTT

How do we help Enterprises

1. Quantify threat readiness and risk
- Show measurable preparedness against real threats and APT groups to satisfy board and audit expectations.
- Supports spend justification and security audits.

2. Reusable purple teaming ranges
- Run purple exercises without spinning up your own infrastructure.
- Supports attacker/defender collaboration.
- Red teams can inject their own malware to test detections.

3. Simulate APTs and ransomware techniques
- Simulate full attack chains and incident response workflows mapped to MITRE/NIST.
- Train teams against threats from real groups like APT29, Scattered Spider, Volt Typhoon.

4. Performance-based IR validation
- Measure response time, detection quality, and incident escalation.
- Get metrics like MTTR and detection coverage to prove risk reduction.
- Use results for audits, tabletop reviews, and detection tuning.

5. Talent sourcing and assessment
- Go beyond resumes and certs.
- Vet candidates with labs tied to real tasks (IR, detection, red ops) before hiring.

6. Certify job readiness
- The only certs blending theory with threat simulation.
- Includes our AI Red Teamer path — built with Google, the first of its kind.
- All certs and role paths are included in team licenses.

Many teams use HTB alongside other training providers. While others focus on cert prep or micro-learning, HTB fills the threat simulation gap letting you simulate the full attack chains — purple teaming, IR workflows, and detection validation your teams can measure.
