

Experts in  
**MRE's** (Meal ready to eat)

**jomipsa**

# We are **jomipsa**

We are a **global company dedicated to the production of MREs (Meals Ready to Eat) and Humanitarian Aid Kits**, among other products.

**At jomipsa, we provide essential support when it is needed most.** This mission guides every action we take and is built on values that define us: sustainability, shared commitment, flexibility, and innovation.

With more than 40 years of experience, we have learned to develop solutions tailored to the needs of different clients. **Sustainability is a core pillar of our work**; we ensure that every solution responds to current demands while contributing to a fairer and more responsible future. **We believe in the strength of shared commitment**, working closely with suppliers, clients, and teams to achieve common goals and deliver solutions that create a positive impact.

**Our flexibility allows us to adapt to the changing needs of each project**, responding with agility and efficiency in critical situations. At the same time, **innovation drives our constant evolution**, always seeking new ways to meet our clients' needs with safe, high-quality, and sustainable products.

We have modern facilities, advanced technology applied to each process, and a team that operates under standards certified by recognized institutions, ensuring trust and excellence at every step.

*We believe that **together** we  
can make a real difference in  
people's lives*

**40+ years**  
of experience

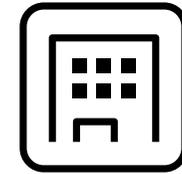

# Our facilities

At **jomipsa**, we have 12,000 square meters of facilities. Here we manufacture Kits tailored to specific requirements on demand and have the capacity to store up to 8,000 pallets with products ready for immediate shipment.

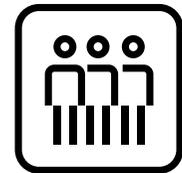

We are a team of more than 100 professionals dedicated to developing solutions adapted to our clients' needs, prioritizing immediacy and functionality. We work continuously to meet the nutritional needs of Defense Forces and Organisations worldwide.

Efficient coordination between the departments involved in each project is key to ensuring advanced and safe products. From product conception, packaging design, and assembly to logistics and delivery, we work together to make sure our solutions meet our clients' expectations.

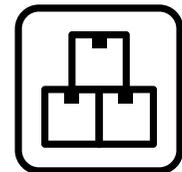

Our value is rooted in our commitment to quality and safety. **"Always safe"** is more than a motto; it is the principle that guides our work to develop products that perform in extreme situations, where failure is not an option. This conviction reflects our mission: to be present when we are needed the most.

# Strategic logistics

Our **logistics service is designed to minimize resource consumption and maximize efficiency**, driven by professionals committed to optimization at every stage of the process. Providing essential support when it is needed most requires overcoming the most complex logistical challenges with responsibility and effectiveness.

Shipping food products to certain countries demands compliance with governmental import regulations, ensuring safe and efficient trade. Our logistics team is prepared to manage the entire process, positioning products in the destination country and ensuring the flexibility required to respond to each client's needs and every situation.

Located strategically in the southeast of Spain, **our facilities are designed to meet the most demanding logistical requirements** by air, sea, or land, with speed and security.

**Always on the move, always on time.**

# Committed to quality

Being part of the supply chain for International, Multilateral and National Public Organizations is both a commitment and a constant challenge for us. Meeting our clients' needs with efficiency, punctuality, and within budget requires having the most advanced quality management systems.

For this reason, we ensure - through internal procedures and external audits - that we meet the circumstances and the expectations of those who place their trust in us.

## 1. Quality control

We undergo regular quality audits carried out by the most demanding independent organizations, enabling us to work with efficiency and safety.

## 2. Continuous improvement

Our internal quality department ensures that every process is monitored through performance indicators, allowing us to constantly evaluate each operation and work toward the continuous improvement of our company.

## 3. Certifications (ISO)

Only through the strictest certifications can we guarantee the highest level of safety in the products we supply to national defense forces and humanitarian organizations worldwide.

9.001 / 14.001 / FSSC 22.000

The ISO 9001 certification allows us to exercise precise control over every aspect of the supply chain, including traceability, supplier audits, process control, staff supervision, and the application of good practices.

Environmental management applied throughout all our processes is one of the core pillars of our commitment to society and the environment. We hold ISO 14001 certification, which enables us to reduce environmental impact and ensure compliance with current legislation in the countries where we operate.

The FSSC 22000 certification is a highly demanding requirement that ensures the food contained in our MRE's is safe, suitable for storage, and ready for consumption. This standard guarantees that we have the internal and external control mechanisms required to preserve product integrity at every stage.

# MRE for demanding missions

In military operations and civil service, every resource matters. We **develop MRE's that ensure energy, safety, and efficiency**, providing essential products adapted to the most demanding conditions. Our commitment is to deliver reliable, high-quality solutions that support the well-being, resilience, and performance of those serving on the front line.

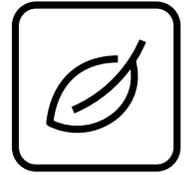

## Experts in MRE

We specialize in the design and production of MRE's **tailored to the specific needs** of Armed Forces and Public Organizations. **Each MRE is developed with consideration for the nutritional, cultural, and operational requirements of each country**, ensuring an appropriate, balanced, and respectful response in every context.

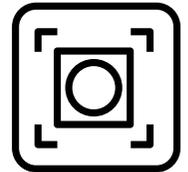

Our experience and industrial capacity allow us to manufacture and distribute large volumes of MRE's in short lead times, guaranteeing quality, food safety, and compliance with the highest standards.

*Solutions that fuel resilience, safeguard security, and support the success of every mission*

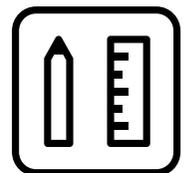

Lightweight

Compact

Transportable

Customized

# Customization and Innovation

We work closely with Ministries of Defense, Security Forces, and Public Organizations to design food solutions that meet the requirements of each mission. Our experience allows us to adapt MRE's to different climates, types of operations, and specific needs of deployed personnel, ensuring proper nutritional intake and preservation under extreme conditions.

**Every operation is unique.** That is why we develop customized MRE's according to the type of mission—maneuvers in extreme climates, extended deployments, training exercises, or humanitarian missions—and based on the energy and logistical requirements of each unit. It is not only about supplying food, but about delivering complete solutions that secure performance, health, and morale.

Our people-centered approach drives us to innovate constantly, incorporating new technologies and best practices to create MRE's that are safe, practical, and balanced. By working together with Defense and Public Security authorities, **we help ensure more effective and safer operations** supporting those who protect and serve.

## MRE's designed for every mission, culture, and need

In demanding environments and critical operations—whether in defense and security missions, extended deployments, or humanitarian interventions—proper nutrition does more than feed: it sustains, comforts, and makes a decisive difference in the performance and recovery of those on the front line.

Our MRE's not only ensure the essential nutritional values needed to survive and perform in extreme conditions, but also take care of every detail: flavors, ingredients, and formats adapted to guarantee a safe and comfortable eating experience, even in the most adverse circumstances.

Whether in an emergency operation, supporting vulnerable populations, or assisting deployed forces, we provide effective, practical, and **culturally respectful food solutions designed to respond precisely to each mission.**

# MRE Flex

At **jomipsa**, we have developed a generic **MRE designed** to provide practicality, safety, and ease of use in any operational environment. Its main advantage lies in its **customization capacity**, as it can be adapted with a single label, allowing quick and efficient identification according to the needs of each client or mission.

The ration is **factory-sealed**, ensuring proper preservation of the products during transport and guaranteeing their optimal condition until opening. For greater convenience, we have incorporated a **ZIP closure** at the bottom, allowing it **to be resealed once opened**, protecting the food and extending its shelf life during prolonged use.

It also includes a **resistant pre-cut handle** that facilitates transport, making this MRE a functional and convenient solution for operations on the move or situations requiring agility and efficiency.

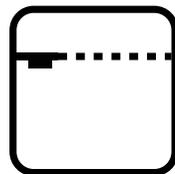

With this proposal, we reinforce our commitment to providing adapted, safe, and easy-to-handle solutions, always maintaining the balance between quality, functionality, and product care.

## 24H MRE

This is the format most commonly used by our clients. It is based on a three-meal menu (breakfast, lunch and dinner), snacks and drink mixes, as well as hygiene products and utensils for heating the food. It provides an **average of 3,200 - 4,200 kcal** and has an **approximate weight of 2 kg**.

Kcal  
3.600

## 12H MRE

This ration is configured as a **lighter option** for those who only require two main meals. It generally includes breakfast and lunch, along with complementary snacks, providing an energy intake of approximately 2,000 kcal.

Kcal  
2.000

## Desert 24H MRE

This ration is designed with a **three-meal configuration** and includes additional isotonic and rehydrating products to replenish electrolytes and minerals lost through sweating in extreme heat conditions.

Kcal  
3.500

## 24H MRE in box

Kcal  
2.500

This format has a composition similar to the 24-hour pouch ration, but we use cans instead of aluminum pouches for food packaging. In addition, **logistics and storage are optimized**, reducing the average cost per ration. Particularly useful for civilian purposes and emergency action.

## Cold 24H MRE

Kcal  
5.000

This ration has been specifically **designed for operations in very low-temperature areas**, where high energy value and reduced weight are required to avoid user fatigue. Due to the risk of freezing, the main courses are provided in freeze-dried form.

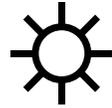

## Survival MRE

Kcal  
1.250

This ration is designed to be consumed in emergency situations. The products it contains provide up to 1,250 kcal and can be eaten without heating. Packed in a small, reusable 500 g metal box, it is an **ideal option for easy transport at all times.**

# Breakfast

We offer a wide variety of options for what we consider the most important meal of the day. A complete breakfast is essential to start the day with energy and maintain motivation in every task.

*We include tea, coffee, a warm "all-day breakfast meal" or omelet with rice, omelet with rice, powdered milk, sugar, honey, muesli, biscuits, jams, and long-lasting cakes.*

*Each element provides energy and practicality to begin the day with strength.*

# Food supplements

We design these supplements to serve specific functions such as restoring salts, electrolytes, and fluids, supporting hydration and the body's balance. They are essential to compensate for intense physical effort and sustain performance in high-demand activities.

*We include isotonic drinks, recovery supplements, rehydrating agents, energy drinks, salt, pepper, and sauces, among others.*

# Snacks

They are essential in long-duration operations, as they provide a continuous supply of nutrients and help keep the mind active and focused on the task.

*We include energy bars, fruit, chewing gum, sweets, and juices, among others.*

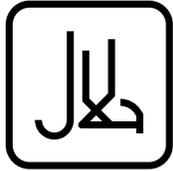

# Hygiene articles

An MRE must be functional and self-sufficient to facilitate operational logistics and ensure an efficient food supply for the troops. Meals must not only be balanced but also safe for consumption. For this reason, we incorporate items that guarantee hygienic and practical intake.

*We include wet wipes, tissues, napkins, dental kits, cutlery, and water purification tablets.*

Halal recipes

Different sizes

Vegetarian recipes

Multilingual labels

## Main courses

We offer our main courses in cans or pouches, representing a major advancement in food preservation. Each recipe is adapted to the gastronomic and cultural preferences of our clients.

The pouch is a lightweight, safe, and easy-to-carry solution. Its Doypack system allows it to remain stable and upright. It can also be heated with flameless chemical heaters, which emit no odors or flavors and do not reveal the soldier's position.

*We provide options with meat, fish, vegetarian, vegan, halal, Indian-inspired recipes, customized preparations, and desserts.*

*Cans*

*Pouches*

# Heating

Our product catalog includes items that allow meals to be consumed hot. Among them, flameless heaters stand out—an innovation activated with just a small amount of water that heats a dish in only 12 minutes, without smoke or altering the taste or smell of the food. They work under any weather conditions, unaffected by wind, rain, or snow.

We include flameless heaters, heating kits with matches, and fuel tablets.

# Our commitment to sustainability

Sustainability is an essential part of our business strategy. We integrate ESG (Environmental, Social, and Governance) criteria at every operational level, guided by the Green Protocol and aligned with the Sustainable Development Goals (SDGs). Since 2010, we have been signatories of the United Nations Global Compact, reaffirming our commitment to human rights, decent work, and climate action.

We have achieved significant milestones that strengthen our commitment to sustainability, social well-being, and ethical business management.

In the environmental field, we have measured and reduced direct emissions compared to previous years. All the electricity we use comes from 100% renewable and certified sources, reinforcing our commitment to clean energy. In addition, **we expanded our solar plant, reaching 36% energy self-consumption**. In waste management, we have recovered 95% of waste, avoiding landfill disposal, and **more than 85% of our packaging is recyclable** or environmentally friendly, in line with circular economy principles.

On the social dimension, **our team has grown to 114 people**, with 54% female representation and cultural diversity that brings together eleven nationalities. We maintain a **high level of job stability**, with 96% permanent contracts, and have reduced workplace incidents, reinforcing our commitment to safety.

In terms of governance, we have consolidated our ESG Committee, which meets quarterly to ensure compliance with the highest standards. We have an active ethics channel and **have incorporated ESG clauses into 100% of our third-party contracts**. Furthermore, we have successfully passed internationally recognized audits such as WCA, **ISO 14001**, **ISO 9001**, and **FSSC 22000**, demonstrating the strength of our management system.

## Innovation and a sustainable value chain

Sustainable innovation has been one of our key priorities. We have developed new long-lasting, low-impact food products, such as palm oil-free sponge cakes. We have also incorporated recyclable and biodegradable materials into our MRE's and packaging, reducing our environmental footprint. At the operational level, we have fully digitalized key processes such as food source and quality traceability, as well as invoicing and administrative processes, improving efficiency and transparency.

In our supply chain, we actively promote responsible purchasing. This ensures that our ethical and sustainable standards extend throughout our entire value network, strengthening the integrity of our business.

## Green logistics and efficient operations

Our logistics strategy has evolved toward greater efficiency and lower environmental impact. We have optimized routes, eliminated unnecessary packaging, prioritized maritime transport, and encouraged shipment consolidation to reduce emissions. In addition, we are implementing a Scope 3 logistics emissions reduction plan, framed within our green climate transition roadmap.

## Verification and transparency

To ensure the reliability of our information, **all our sustainability indicators are audited by highly recognized inspection and certification bodies**. We comply with the most demanding regulatory frameworks, such as GRI, CSRD, ESRS, and the Sustainable Development Goals (SDGs). We have also reaffirmed our commitment to the United Nations Global Compact, reinforcing our dedication to continuous improvement and global ethical action.

**jomipsa is a trusted strategic partner for agencies, NGOs, and public entities, capable of responding responsibly to the challenges of today and tomorrow.**

*Our vision is to be a global benchmark in the agile supply of safe and sustainable solutions for basic needs.*

**jomipsa** always  
safe
