CyberDesk

Identity Centric Data Security

CyberDesk is the fine-grained authorization layer built for the modern enterprise. Today, more than 95% of data access rights go unused. To reduce this attack surface, CyberDesk helps organizations adaptively control who can take what actions on which data. Covering human, machine, and agentic identities, our dynamic access graph visualizes, manages, and automates entitlements, where existing solutions are blind.

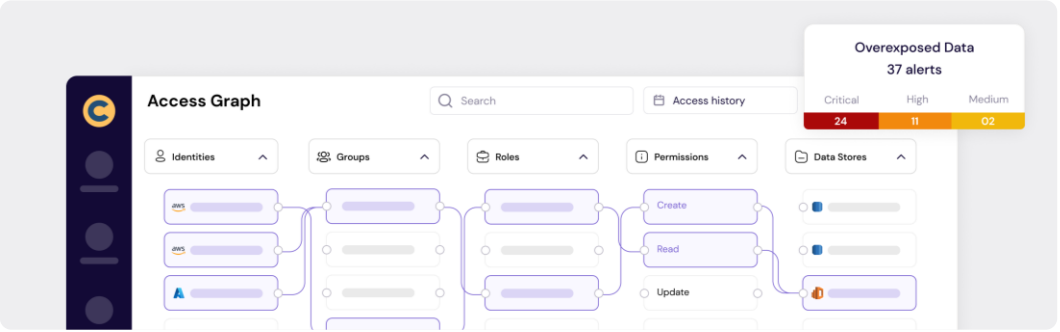

Key facts:

Category	Identity Visibility & Intelligence Platforms (IVIP)
Incorporation	2022
Location	Munich, Germany

CYBERSECURITY MADE IN EUROPE

BEST OF TECHNOLOGY 2025 Wirtschafts Woche

Rising Star CyberDesk 2025

Benefits:

- Reduce overprovisioning & secure AI access
- Mitigate compliance risks under GDPR, DORA, & NIS2 regulations
- Optimize data usage & costs

Integrations:

- Unified data & identity inventory discovered, consolidated, and classified across hyperscalers, SaaS, & on-prem

Reference Clients & Partners:

- Global organizations with 70 to 35,000 employees in the financial, industrial, and technology sectors as customers
- Leading CISOs as advisors

Security & Compliance:

- TÜV-certified security in line with ISO 27001
- No raw data ever leaves the customer environment
