

Biomycosin Vet

Biomycosin Vet is a preparation applied in the form of a water based spray or water bath that has mycoparasitic effects in eliminating filamentous micromycetes and yeasts on the skin, hair and other skin derivatives, such as hooves.

It's applied on the livestock by spraying with special attention to the affected areas.

Application: In the form of a spray at a convenient time when the animal is calm and does not require special care or attention.

Spraying should be carried out from a distance of approximately 15-20 cm from the affected area. Follow the instructions for use.

Instructions for use:

1. Pour the contents of the jar into a spray bottle of approximately 15 litres. When preparing the solution, avoid inhalation of dust.
2. Add 15 litres of clean water and shake the solution well.
3. Using a sprayer, apply the solution all over the animal's body, taking particular care to treat the affected areas.
4. Apply once a day for the first five days, then as needed and as symptoms persist.

Do not use any other products on the day of application.

Veterinary product – FOR ANIMALS ONLY Veterinary product approval number: 009-22/C

Clever Fungus Ecosin

A biological additive to a water spray or water bath that eliminates filamentous micromycetes and yeasts organisms on skin, hair and other skin derivatives (claws, hooves, hoofs, etc.).

- Suitable for care of skin, coat prone to dermatophytic (fungal) and yeast infections
- Suitable for promoting natural growth of microbial flora on the skin and coat
- Suitable for skin and coats prone to chafing
- Suitable for fighting symptoms of thrush in horses

Clever Fungus Dermasin oil

Suitable for combining with veterinary product Ecosin

Suitable for skin and coat care. Especially suitable for dry skin prone to atopic eczema. Helps regenerate small deposits of damaged skin and can be a supplement after application of Ecosin. It softens the skin and thanks to its microflora content favourably affects the defence mechanisms of the skin of mammals, birds and terrestrial reptiles.

Pythie Dog Paw Balm

Softens and treats paws affected by salt or frozen snow, or by walking on uneven surfaces.

Pythie Dog balm is used to maintain the skin of the dog's paws soft and supple.

In case of injury, accelerates the healing process.

Pythie Dog Veterinary ointment

The ointment is beneficial in the treatment of poorly healing surface wounds, minor skin and mucosal injuries, abrasions, insect stings, hard and scaly skin.

Thanks to its composition, it suppresses the growth of bacteria and moulds, soothes the inflammatory reactions, suppresses the itching and smooths scars. It promotes growth of the dog coat and its recovery.

Biomycosin Vet

Biomycosin Vet is a preparation applied in the form of a water based spray or water bath that has mycoparasitic effects in eliminating filamentous micromycetes and yeasts on the skin, hair and other skin derivatives, such as hooves.

It's applied on the livestock by spraying with special attention to the affected areas.

Pythie Dog Fresh Breath

Is composed of unique microorganisms with beneficial effects on the oral cavity. It is suitable for use in the care of gums and teeth in case of tendency to gum irritation and tartar formation, it also refreshes the breath.

Pythie dog ear cleaner

This product is designed to gently clean the external ear canal,

It dissolves cerumen (earwax) and impurities. It helps

protect the external ear canal from microorganisms that can

cause health problems. Relieves irritation. Moisturizes the dried skin of the ear.
