Sustainability is our top priority

Plomp en Zonen B.V. specialises in processing wood fibre/shavings into high-quality, comfortable bedding. A by-product to some, for Plomp it provides the raw material for a 'new' high-quality product. Nature, the environment and the pure qualities of wood drove the development of a range of products in the field of bedding litter for a variety of applications. Our products are 100% natural. The ideal basis for 100% natural bedding with a focus on comfort, appearance and convenience.

We market our products under the brand name Plospan®. When it comes to hygiene and healthcare, the product characteristics of this natural bedding are excellent, especially when compared to the other bedding materials on the market.

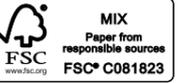

Plomp en Zonen B.V. has a long history as a reliable partner for the collection and delivery of wood fibre and wood shaving products in Europe and has a global sales network. This is in part thanks to continuous investment in advanced production and processing techniques. The family firm guarantees a high-quality product, good service and reliability towards our suppliers and clients as well as making sustainability a top priority.

Classic Woodshavings

The Classic Woodshavings is an almost dust-free product. This is one of the main reasons that many vets recommend wood fibre for use as bedding for horses. The latter's sensitive lungs and bronchia are spared as much as possible with this shavings material. This benefits the animal's health.

Advantages:

- Ideal litter
- Low dust
- Versatile

Excellent Woodshavings

Excellent Woodshavings is especially recommended as the ideal bedding for your horses and is the most dust-free bedding available. This significantly reduces irritation to the horses' respiratory and bronchial tracts, which is why so many horse sport owners prefer our XL Woodshavings.

Advantages:

- Optimum care and comfort
- Dusted and versatile
- Very good hygiene
- Voluminous

Granulate

Plospan granulate consists of the fine material provided by wood shavings from our own wood mill. Thanks to the process this undergoes, Plospan wood granulate is extra dry which makes it very hygienic and dust free.

Advantages:

- Very absorbent
- Extra sieved
- Sustainable

Flax

Flax is an agricultural crop that thrives on clay soils in the Netherlands, Belgium and Northern France. The by-product Flax is made from the core of the stalk. Flax is a popular stable bedding thanks to its appealing pricing and excellent applicability.

Advantages:

- Good Absorption
- Rapidly compostable

Horse Box Pellets

These high-pressure-compacted wood pellets also make an excellent choice when mixed with other horse bedding. The compact pellets' high level of absorption ensure you don't need to muck out as often. Horse Box Pellets can be used as a complete bedding, but also, for example, in the corners of horse stables and in combination with woodshavings.

Advantages:

- High level of absorption
- Increased hygiene
- Smell reduction

Sawdust

Sawdust is lighter and has a finer consistency than wood shavings and is primarily used as bedding for pigs and cattle. This user-friendly product is very absorbent, and makes an excellent, easy to use, practical bedding.

Advantages:

- Very absorbent
- Highly functional
- Comfortable

Super Sawdust

Super Sawdust is lighter and has a finer consistency than our standard sawdust. Super Sawdust is sieved twice making it the most dust-free sawdust product in our range.

Advantages:

- Very absorbent
- Highly functional
- Absolutely dust free

Hay

Hay is regularly used as an alternative forage. It is tasty and palatable for rodents and all other small animals, and should be included in their feed ration.

Advantages:

- Popular alternative
- Small packs available
- Suitable for rodents

Straw

Straw is also a popular alternative to woodshavings as bedding for rodents. This is supplied as a service product in small packs, but can also be supplied in large packs on pallets. This means it is available in spread volumes of 30 or 75 litres and also as a bulk product.

Advantages:

- Popular alternative
- Small packs also available
- Suitable for rodents

Service | Suppliers

It is important to Plomp en Zn. B.V.'s suppliers that the waste wood from their own production line is collected by us in a timely manner. This helps their processes flow and ensures the efficient disposal of their waste wood products. We can install trailers or special suction containers to collect their waste products. This allows them to concentrate entirely on their core business and process.

The collection of our raw materials takes place with sustainability in mind. On average, Plomp en Zonen B.V. augments its own fleet of well over 30 truck and trailers with 10 from external transport companies. This makes us extremely flexible and ensures that the routes for the collection of waste products and those for the delivery of end products to clients can be meticulously harmonised. Our vehicles basically never travel empty. This helps us save energy and – to the greatest extent possible – the environment. Our truck-trailers also meet the recently introduced Euro IV and Euro V standards making them drive more cleanly.

Whereas others refer to recycling, we prefer to call it upcycling. What is a waste product to many, is Plomp's basis for a new top product. Which explains the term upcycling. This definitely applies to our Plospan wood pellets.

Wood chips

Sale of clean wood (Class A 0-40 mm).
For use in wood combusting systems.

Advantages:

- Our wood chips are Class A wood (clean, unprocessed timber)
- The wood chips consist of 80-90% pine and 10-20% hardwood
- The wood chips have been sieved and are therefore dust free
- The chips' moisture content is between 20-25%. At 20%, the wood chips provide 4KWH

Wood pellets | deciduous and pine

Piospan Bio-Energy wood pellets occupy a strong position on the market because the company has developed a top-quality wood pellet. The biggest difference in comparison to other pellets is the combustion value. Wood pellets are CO₂ neutral i.e. the tree that constitutes the raw material for the production of wood pellets absorbs just as much CO₂ as is released during the latter's combustion.

Upcycling | the new recycling08

Plospan wood pellets are particularly suitable for firing small to medium-sized pellet burning systems. The wood pellets are very compact and therefore provide properly controllable and especially clean combustion. The following small overview was created to give you an impression of the actual combustion values of the various fuels:

- 1 m³ natural gas 31.65 MJ
- 1 kg heating oil 41.9 MJ
- 1 kg Plospan Bio wood pellets 18.5 MJ

Plospan Bio-Energy certification unique in the Netherlands

Plospan is the only company in the Netherlands to have three certificates: quality marks ENPlusA1 and DINplus as well as sustainability certificate NTA8080. Consumers are guaranteed high-quality wood pellets that are environmentally sustainable. The certification proves that our entire processing chain from raw materials and production right the way through to delivering products are constantly assessed as

- Advantages:
- Optimum mix of pine and deciduous wood
 - Certificates
 - Best quality on the market
 - CO₂-neutral firing with Plospan Bio-Energy
 - Clean combustion
 - Cheaper than firewood and gas

to guaranteed quality and sustainability. Since our solar panels came online, the entire factory is also solar powered i.e. the sun ensures tree growth and provides us with the energy required to create a very environmentally-friendly product.
