Keeping businesses safe with layers of protection

VIPRE Security Group offers layers of protection including endpoint and email security as well as threat intelligence and user training

Delivering superior protection against a maelstrom of threats is tough enough. It's even more problematic when you're forced to rely on a hodgepodge of disparate solutions to stitch together a viable security package. At best you'll achieve adequate protection at the cost of major deployment and management inefficiency, at worst your users will be vulnerable to attack and you'll be mired in a time-consuming scramble to find how threats are evading detection.

VIPRE offers a better way. By meeting all of your security needs with one cohesive portfolio of solutions that are purpose-built to work together, VIPRE enables you to combine maximum protection for your end users with seamless purchase, deployment, management and tech support processes.

Endpoint Protection

Powerful endpoint security delivering protection against today's most sophisticated online threats.

- **Endpoint Detection and Response (EDR)** empowers user to instantly detect and respond to endpoint threats with next-generation antivirus technology built for small to medium sized enterprises (SMEs) and the partners that serve them

- **Endpoint Cloud** protects at the file, application and network layer combining multiple layers of security with network and application agnostic DNS protection

- **Endpoint Server** delivers active file and process protection against emerging threats, zero-days and ransomware with additional device control and third party patch management

- **Site Manager** is purpose-built for advanced endpoint protection with DNS in a multi-tenant environment

- **Encrypt.team** is an easy to manage, cloud-based VPN and the secure way to protect employees from online threats while working remotely or on-the-go

Email Protection

Unparalleled protection from advanced email threats delivered from the convenience of a cloud-based architecture.

- **Email Cloud with Add-on Solutions** secure the #1 attack vector from emerging email-based threats and leverage phishing protection, attachment sandboxing, archiving and encryption
- **Advanced Threat Protection** provides enterprise-grade email protection in an easy to use, out of the box package that includes attachment sandboxing and link isolation
- **Email Security for Exchange** defends networks against spam, phishing, viruses and security threats transmitted via email
- **SafeSend** confirms external email recipients and attachments with a convenient Microsoft Outlook add-in solving the problem of misaddressed emails and preventing data leakage

Threat Intelligence

Real-time threat intelligence and the industry's premier sandbox for next-gen malware analysis.

- **ThreatAnalyzer Sandbox** is a dynamic malware analysis sandbox that lets you safely reveal the potential impact of malware on your organization
- **ThreatIQ** compiles real-time, global threat intelligence to understand where attackers are coming from and how they're working to infiltrate networks

User Protection

Turn-key training solutions that protect users, their actions and sensitive business information from costly attacks and data breaches. Powered by the multi-award-winning Inspired eLearning platform, these solutions feature scalable, comprehensive courses built on decades of Fortune 500 deployments.

- **Security Awareness Training** delivers cloud-based user training and learning modules that build practical, cost-effective security awareness to an organization's employees
- **Human Resources Training** delivers relevant and relatable training to prepare teams for internal and external workplace threats
- **Compliance Training** courses educate teams about sexual harassment, privacy and compliance to minimize risk

Why Choose VIPRE?

VIPRE Security Group puts more than twenty years of advanced security intelligence, cutting-edge machine learning, real-time behavioral analysis, and a comprehensive threat intelligence network to work defending against known and unknown attacks. Our comprehensive approach to email security is suitable for all security professionals providing what you need when you need it. Build a layered defense against today's most prevalent malware threats. Secure your endpoints, email, network, and user from emerging threats like viruses, Trojans, rootkits, exploits, spyware, malicious websites, phishing attacks and more.
