FÜR ETIKETTIERLÖSUNGEN

YOUR PARTNER FOR LABELLING SOLUTIONS SINCE 1984

DEVELOPMENT BEYOND BORDERS

For around 40 years, we have been developing labelling solutions for your requirements – individually tailored to your products, regardless of the industry. We have made it our business to find a solution for every problem – and thus to constantly think development further.

Our aim is to work out the technical task in dialogue with you on the basis of your wishes, needs and requirements, and then to find the best so-

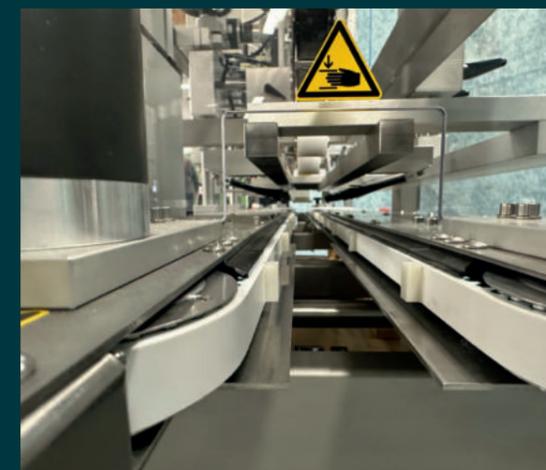

lution for you. To this end, we have developed a modular system with various components that can be individually adapted to your labelling tasks with self-adhesive labels.

Whether stand-alone solutions or integrated into a production line: our systems can be easily integrated into any system, and even retrofitted.

This is ensured by our team of experienced specialists and up-and-coming engineers and technicians – and has been since 1984.

CONTINUOUS DEVELOPMENT – IN YOUR INTEREST

Every product is unique – and presents an individual challenge. We rise to this challenge and find a solution for every container shape. We can do this thanks to our modular principle and our in-house production in Germany. We also have the option of using various standard components and adapting them to your requirements. Depending on your wishes and requirements, individual labelling solutions can be designed and manufactured for you.

OUR MODULAR PRINCIPLE

Our modular principle is the basis for our machines and systems. This means they can be combined not only with each other, but also with existing systems. In this way, you get maximum flexibility and what you need, starting with the substructure (made of stainless steel or aluminium profiles) to product guidance to various additional functions. Quality and process reliability are always our focus.

QUALITY AND INNOVATION MEET CUSTOMISED SOLUTIONS: OUR MACHINES

From individual labelling machines to complete labelling systems – we supply you with the right solution. Whether it's an existing machine that needs adaptation or a new design: we have a wide range of robust and durable labelling solutions, from standard designs to special machines and special solutions, and can draw on a wealth of accessories.

○ LABELLING MACHINES

Our labelling machines can be installed flexibly and adapt to different conveyor speeds and attachment situations. When installed in a conveyor system, they ensure extremely high labelling accuracy – cleanly and precisely.

FULLY AUTOMATIC LABELLING MACHINES – OUR LABELLING MACHINES FOR INSTALLATION

Our fully automatic labelling machine for installation can be integrated into any conveyor system and is available for many different packaging lines, in different versions, with different components and for a wide range of products to be packaged – for example for: tubular bags, cardboard boxes, blisters, films, bottles, pallets, trays or crates.

Fully automatic labelling machines work efficiently and adapt individually to your production line or packaging machine. They take over the complete labelling process.

SEMI-AUTOMATIC LABELLING MACHINES – IDEAL FOR SEASONAL RUNS

They are perfect for shorter runs or complex product shapes such as round, oval or square packages made of a wide variety of materials, or even complex containers with free-form surfaces. They are flexible, compact and handy: our semi-automatic labelling machines. Simple manual operation and fast, accurate labelling are further plus points. Up to 1,000 products per hour can be labelled with this efficient machine. These include, for example, wine bottles, cans, glasses, bags, cardboard boxes, tubes and books. Special formats such as syringes, cartridges etc., are also possible.

FULLY AUTOMATIC LABELLING SYSTEMS

All SES labelling machines are also available as complete labelling systems, consisting of conveyor technology, label dispenser, printing system and, if necessary, other special components. Each system is individually adapted to your requirements and delivered together with the necessary components as a complete labelling system. Thanks to our modular design principle, the systems can be converted to each individual product in a very short time. In addition, you can choose from a wide variety of conveyor technology modules – from belt conveyors to toothed belts to chain conveyor technology. Depending on the production environment, there is the option of manufacturing the main components of the labelling system from stainless steel or aluminium.

LABELLING SYSTEMS IN TANDEM DESIGN

Our high-performance tandem labelling systems ensure a smooth production flow. Thanks to mul-

iple labelling units connected, which alternate by means of a highly complex control system in the event of a label shortage or malfunction, an uninterrupted production run is guaranteed at all times. Material changes and troubleshooting can thus be carried out while production continues.

DOUBLE LINE LABELLING SYSTEMS

Our double-line labelling systems are a fully automatic, cost-effective alternative to so-called rotary systems and are ideal for labelling complicated product shapes such as rectangular or oval cans. The products are divided between two labelling lines, so that doubling the line output is possible without any problems.

○ LABELLING SYSTEMS

THERMAL TRANSFER LABELLING SYSTEMS

Cost-effective, environmentally friendly and ideal for customising your labels: with our systems and state-of-the-art thermal transfer printing technology, you can print your labels immediately before applying them to the product. And in the highest quality: thermal transfer printing offers excellent print resolution in 300 or 600 dpi and extremely durable labels. It works on a wide range of materials, such as standard or chrome paper, polyethylene

and polypropylene films, textile fabric, as direct printing on products and product packaging.

The associated label design software can be perfectly integrated into your IT infrastructure. Via an interface to your database (Access, Excel, SQL, ODBC), you can quickly and easily transfer the existing information to the desired label. All common GHS symbols, for example, are also available as standard.

SERVICE ON THE PULSE OF TIME

Our claim to quality and customer orientation is also reflected in our service: our service is just as individual as our labelling solutions – tailored to your needs. Whether it's regular maintenance or an urgent technician call-out – our team will be happy to assist you. Together with you, we would like to identify your individual service needs and then offer you an optimal solution.
