

# Reliable Exporter you can trust

Established in 1998 with Dutch mentors, IndoTropika started exporting ornamental aquatic specimens to Europe.

We understand clearly that shipping poor aquatic specimens results in customer losses on time, aquarium space, medicine and most importantly lost sales.

After 25 years of hard work and unwavering commitment to our core philosophy of shipping only good quality, good sizes, together with our careful attention to customer's needs made us Indonesia's leading wholesale exporter of live ornamental aquatic specimens.

We have invested in people, built modern facilities and developed efficient and effective methods to properly handle ornamental fish, crustaceans ( crabs & shrimps ), molluscs ( snails & clams ) amongst other specimens.

Altogether, this allowed us to consistently deliver premium quality ornamental freshwater aquatic specimens at competitive prices for our customers worldwide.
