

# ARBOLEO HDPE WATERING RESERVOIR

FOR OPTIMAL IRRIGATION AND TREE GROWTH

• DEEP SATURATION OF THE TREE ROOTS • WATER-SAVING • FOR STRONG PLANTINGS •

## Young trees are susceptible to drought injury.

Arboleo watering edges ensure optimal watering. By placing a watering reservoir around the tree, the water does not flow away sideways but saturates the soil and tree roots in a controlled manner. For healthy and strong plantings!

- The watering reservoir is buried up to approx. 10 cm into the ground for stability
- The watering casing protrudes approx. 20 cm above the ground
- Diameter root ball = diameter watering reservoir
- Allow for a small overlap where the ends meet
- Can be connected with a connector, double-sided tape, bolt and nut, nails, etc.
- The 2,0 mm thick watering edge protects the tree from mowing damage
- Reusable for new plantings
- Even and good saturation at the roots
- Water-saving!

## SPECIFICATIONS

Thickness	1,5 mm and 2,0 mm
Material	HDPE
Size	50 x 0,30 m
Colour	black
