

# Smart LED matrix for your Speedgate

Enhance your Speedgate with a versatile LED matrix display. Effortlessly show signals, notifications, and logos. Simple to install with just three wires, it connects directly to your control system and adjusts its brightness based on the time of day. Powered by 24 volts, it delivers reliable performance around the clock.

## Why choose an LED matrix display?

### Clear communication

Enhance communication with your clients by displaying more than just red and green signals.

### Customizable content

Add your company logo or other visuals directly onto the display, making it fully customizable.

### Direct integration

The LED display communicates directly with the Speedgate control system at the protocol level, ensuring seamless operation.

### Real-time notifications

Receive and display important system messages directly on the screen.

## Other powerful functions

### Custom messaging

Display real-time updates, instructions or alerts tailored to your needs, including operational statuses and security notifications. Your company logo can also be added for a personalized touch.

### Dynamic alerts

Provide critical alerts and updates, such as maintenance notices, fire detection and information about temporary events, to keep users informed and manage site flow effectively.

### Visitor instructions

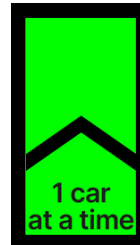

The LED matrix display provides clear, step-by-step guidance with intuitive icons and simple explanations, ensuring drivers know exactly what to do and what to expect.

## Custom branding

You have the option to add your company logo and other branding elements to your display. Make your presentation stand out and reflect your brand's identity with personalized graphics and logos.

## One car at a time

This means that only one vehicle at a time is allowed to proceed through the area. The screen will display only one vehicle at a time. Please wait until your vehicle is shown before continuing. This system ensures clarity and efficiency for all visitors.

## Clear gate area

This indicates that you are positioned too close to the gate. To proceed, please reverse your vehicle a short distance to ensure you are at the correct distance from the gate.

## Maintenance required

This notification indicates that repairs or servicing are in progress to ensure proper functionality. Your patience and understanding are appreciated. Please follow any posted instructions and avoid using the Speedgate until maintenance is finished.

## Do not proceed

This means that all vehicles must stop before approaching the Speedgate.

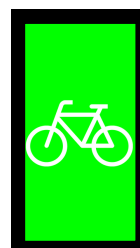

## Wait for green

This means that you need to wait for the red display to change. Please do not continue driving while waiting. Ensure that your vehicle remains stationary until the red display indicates that it is safe to proceed.

## Fire detection

Fire has been detected. The fire alarm system has been notified and the fire control center will receive an alert. The gate will be activated automatically by the fire control center. Please follow any additional instructions and ensure your safety.

## Access for cyclists

When the light is green, you are allowed to continue cycling through. Please note that the gate opens halfway. Be sure to follow any additional safety instructions provided. Your attention to these details helps ensure a smooth and safe experience for everyone.
