

All-in-one secure workspace for your business

One platform. One plan. Built for teams that value privacy and trusted security.

- Email
- Calendar
- File storage
- Docs
- Sheets
- Video conferencing
- VPN endpoint security
- Password manager
- AI assistant

TRUSTED BY LEADING ORGANIZATIONS

Everything your team needs, in one place

Proton Workspace combines all the essential tools your team needs to communicate securely, protect sensitive data, manage access, and stay compliant. It's private by design with end-to-end encryption built into every app, so only you control your data — not even Proton can access it.

For organizations where trust, privacy, and control are non-negotiable, Proton offers a unified, European alternative to US-based services built on data collection and surveillance. Over 100,000 organizations and 100 million people trust Proton to secure their most sensitive data.

Proton Workspace includes:

Proton Mail

Keep business communications private with encrypted email and phishing protection — all without surveillance or tracking.

[Learn More >](#)

Proton Calendar

Securely organize team schedules and let colleagues or clients add appointments directly to your calendar with appointment scheduling.

[Learn More >](#)

Proton Drive

Safeguard sensitive documents with encrypted cloud storage and controlled file sharing, and collaborate in real time on docs and sheets.

[Learn More >](#)

Proton Docs

Collaborate in real-time with an encrypted online document editor that protects every word from data breaches, surveillance, and AI training.

[Learn More >](#)

Proton Sheets

Make sense of confidential business data and manage finances, projects, or tasks with encrypted collaborative spreadsheets.

[Learn More >](#)

Proton Meet

Host and join high-stakes meetings from anywhere with confidential video conferencing, safeguarded from surveillance and eavesdropping.

[Learn More >](#)

Proton VPN

Protect remote teams and internal resources with secure, high-speed VPN access — no hardware or complex setup required.

[Learn More >](#)

Proton Pass

Securely store and share logins, bank cards, and other sensitive items with end-to-end encrypted vaults your team can trust.

[Learn More >](#)

lumo

Empower your team and protect your intellectual property with a confidential AI assistant that doesn't keep record of your chats and never uses your data for model training.

Built for industries that need privacy

From regulated environments to fast-moving tech, Proton Workspace provides a secure, turnkey solution for many key sectors:

High-trust service providers like law firms, compliance advisers, and IT consultants can protect confidential client data and implement data retention policies.

Tech-savvy startups in SaaS, and sectors like AI or blockchain get a privacy-first foundation that scales with their team, with secure access to tools from anywhere in the world.

Marketing and communications teams can collaborate securely, manage credentials, and share sensitive files with full control over who sees what — and for how long.

Nonprofits, healthcare providers, and media organizations can safeguard sensitive information and protect at-risk communities with independently audited encryption across all communication and collaboration.

Key features for teams

Centralized admin dashboard

Add new team members, assign permissions, manage addresses, allocate storage, and handle everything from one place — all with the flexibility you need as your business scales.

Secure file sharing with full control

Share sensitive files and folders and restrict access using expiration dates, passwords, and permissions — whether you're collaborating internally or externally.

User and group management

Set up individual and group email addresses to easily reach entire departments or project teams with a single email.

Custom domains

Send emails from your own domain to keep your brand front and center in every conversation. And set catch-all addresses to ensure no message slips through the cracks.

Access control and shared resources

Control which Proton apps and what business data is available to different members of your team to ensure people only access the information they actually need.

Dedicated IPs and private gateways

Assign dedicated IPs and set up private gateways to give your team consistent, secure access to internal tools no matter where they're working from.

Shared vaults and credential access management

Safely store and share logins, notes, and sensitive data in shared vaults to eliminate risky workarounds like spreadsheets or chat-based sharing.

Intuitive collaborative tools

Keep everyone in sync with Proton Mail, Drive, Docs, Sheets, and Meet. Communicate securely, collaborate in real-time, and hold high-stakes calls without putting your data at risk.

Breach monitoring and credential alerts

Monitor for exposed credentials and get real-time alerts if any team member's login details appear in a data breach, so you can take action fast, protect your accounts, and stay ahead of potential threats.

Activity logs for transparency and admin oversight

See who did what, when, and from where — including password changes, shared vault actions, and secure link usage. Maintain accountability, investigate issues, and keep your organization secure.

Secure access management for growing teams

Enforce two-factor authentication (2FA) and define security policies to protect your organization from external and internal threats as it scales.

Private AI assistant

Research, brainstorm, and perfect your ideas with Lumo — the private AI assistant that never trains on your conversations and never stores chat histories with zero-access encryption. Your data stays yours.

Why Proton?

End-to-end encryption

All Proton tools use end-to-end encryption automatically — so emails, files, meetings, passwords, and browsing data are protected from cyberattacks and surveillance.

Zero-access architecture

Your data stays private, even from Proton. We can't read, share, or sell your business data — and neither can third parties.

European data protection

Proton shields your data with some of the world's strictest laws — outside US jurisdiction — giving your business strong legal protection against surveillance, data misuse, and unauthorized access.

Shielded from AI training

Even with Lumo, your prompts are processed only to generate a reply, and the plaintext is instantly erased so your conversations are never repurposed for AI model training.

Lightweight and secure

Our suite has fewer moving parts and no third-party dependencies — which means less complexity, fewer risks, and stronger security built into every layer.

Easy setup

With Proton's simple interface and round-the-clock customer support, you can onboard your team in minutes, with no learning curve or IT team required.

Ideal for sensitive industries

Proton provides a secure foundation for teams working with sensitive information, such as legal cases, cybersecurity operations, or investigative research.

Open source and audited

All Proton apps are open source and audited by third-party security experts. Anyone can inspect our codebase to check our security practices.

Compliance built in

Proton meets the highest standards for security and privacy, including SOC 2 Type II, GDPR, and ISO 27001 — helping you stay compliant and build trust with clients from day one.

Trusted where privacy matters most

Proton is used by over 100,000 organizations, including government agencies, healthcare providers, media outlets, law firms, and NGOs operating in high-risk environments.

Get started with Proton Workspace

All the tools your team needs — one secure, privacy-first platform.

Protect your data, earn client trust, and stay compliant with Proton Workspace plans: Workspace Standard and Workspace Premium.
