

## ROM-FORT

### MODULAR PROTECTIVE BARRIER SYSTEM

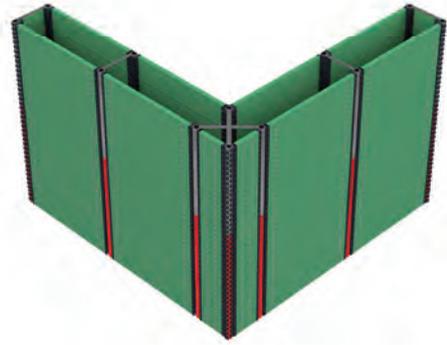

**NEW**

ROM-Fort is a modular above-ground protective barrier system that can be deployed within minutes. It is reusable and suited for long-term storage – hence ideal for flexibly securing barracks gates and convoy support centres (CSC), providing hardened positions for guards and security personnel, and enabling rapid response in the event of an alarm.

#### Mission scenarios:

- Increased surveillance and security of property access points (checkpoints) at threat levels Bravo–Delta.
- Control and delay of vehicle and pedestrian traffic.
- Temporary security in the event of an alarm or dangerous situations.
- Protected observation posts and checkpoints.
- Convoy Support Centre: flexible and quickly available hardened protective position for supply points outside fixed infrastructure.

### Key advantages:

- Quick installation: tool-free assembly, ready for use in no time.
- Reusable & robust: plastic modules with metal frames.
- Logistics-friendly: durable, can be stored outdoors.
- Flexible: modular expandability, can be combined with the ROM-Trench.
- Predictable protective effect: uniform level of protection, no gaps, as with sandbag stacks.
