

Security and networking as one

Connect. Secure. Simplify.

The VersaONE Universal SASE Platform unifies networking and security in a single operating system, policy engine, and data fabric to provide anywhere, anytime access securely to anything. Built from the ground up with a unified architecture – not bolted together with APIs – VersaONE delivers consistent connectivity, protection, and observability across the entire enterprise fabric, from branch and campus to the cloud, data centers, and remote users.

- ✓ Trusted by thousands of enterprises and global service providers.
- ✓ Recognized in the Gartner Magic Quadrants for SASE, SSE, and SD-WAN.
- ✓ Industry-leading scores in NG-Firewall and SSE testing by NSS Labs.

Powered by VersaAI

Defend. Adapt. Automate.

VersaAI is the AI layer inside the VersaONE Universal SASE Platform. It embeds machine learning, prediction, natural language processing, and LLM-assisted workflows across security and networking to make your environment safer, faster, and easier to run.

VersaAI defends, adapts, and automates – while securely connecting AI data, models, and tools everywhere.

One console and unified policy framework for all networking and security functions

Single-pass parallel processing for high-performance security without latency trade-offs

AI-driven analytics and automation to predict issues and remediate before impact

Flexible deployment options: cloud, on-premises, hybrid, or sovereign/air-gapped

Multi-tenant design for service provider scale and enterprise simplicity

VersaONE Platform Solutions

Versa Unified SASE

Versa Unified SASE brings together the full power of Versa Secure SD-WAN and Versa SSE into a single, integrated offering. Unified SASE simplifies deployment and operations by collapsing networking and security into one software stack. Backed by Versa's global backbone and 90+ points of presence (PoPs), Unified SASE delivers low-latency connectivity, consistent security, and AI-driven insight at any edge, across all Versa Unified SASE locations, users, and apps.

- One software stack for security and SD-WAN
- Single-pass architecture
- Centralized unified data lake
- Single policy engine and console
- Deployed globally via 90+ PoPs
- Deployment flexibility
- Ideal for service providers and enterprises

Versa Security Service Edge (SSE)

Delivered from VersaONE, it combines the capabilities of NGFW, Secure Web Gateway, CASB, DLP, ZTNA, and other security services.

- Unified security policies across web, cloud, and private applications
- Seamless user experience with minimal performance trade-offs
- Scalability via cloud-based multi-tenant delivery

Versa Next-Generation Firewall (NGFW)

Versa's NGFW combines deep application visibility, threat prevention, data loss protection, and advanced enforcement in physical, virtual, or cloud-native form factors.

- Layer-7 DPI, URL filtering, intrusion prevention, & ZTA
- IoT/OT profiling, device fingerprinting, and micro-segmentation
- 2x the throughput of any other firewall per NSS Labs

Versa Secure SD-WAN

Versa's SD-WAN is tightly integrated with its security stack, enabling secure connectivity to cloud and data center workloads.

- Application-aware routing and path selection
- QoS prioritization and link steering
- Optimized branch-to-cloud and branch-to-branch connectivity

Versa Secure SD-LAN

Our SD-LAN extends policy enforcement into the campus and branch LAN environment, integrating wired, wireless, and IoT traffic under the same policy fabric.

- Microsegmentation by user, device, or application
- Secure onboarding and segmentation for IoT, BYOD, and guest devices
- Unified visibility across WAN and LAN as part of the Versa data fabric
