BECOME A DEALER

Thousands of creations worldwide, from small private gardens to large hotels. A path of continuous improvement and innovation that puts at the centre the passion and the dedication of the dealers of Biodesign, true pool artists.

WHO WE ARE

The company was founded in 1980 by Franco Milani as a company committed to the design and planning of irrigation systems, parks, golf courses and later on monumental fountains and artificial lakes. In 1996, his son Alessandro Milani took over the management of the company and began the study of a new construction technology capable of transferring the advantages of eco-friendliness and landscape integration of lakes to the swimming pool market. After several years, the investment of resources in research and development brought to technology protected by international patents that reinvented the way pools are built and completed. Biodesign pools soon became the core business of the company and the company also started the Biodesign Academy, an opportunity for the training of professionals specialised in the realisation of Biodesign pools.

After years of strong growth and business development, the Star Capital investment fund acquired a majority stake in the company, making available the resources for pursuing the project of global internationalisation of the company. In 2022, Antonio Filippi became new CEO of the company. Today, the company has a significant presence in 32 countries with more than 8,000 swimming pools built around the world by authorised technicians and dealers, a network of professionals capable of building artistic swimming pools.

CONSTRUCTION STEPS

Modelling of the excavation

EPDM waterproofing sheet

Recirculation technology

Coating layer

FEATURES

- Elimination of water loads
- 300% elasticity of the EPDM layer
- High structural strength

ADVANTAGES

- No structural calculations required
- Suitable for all types of terrain
- Lower water volumes thanks to the conformity of the pool
