

Some words for us ... for Farma Friends ...

With our experience of 25 years and the continuing development in Bird Food production, we become the largest producer in Balkans.

The production facilities set up to supply high quality seed mixtures. Located in Kalochori – Thessaloniki – Greece, the last 3 years we become bigger with 2 plants of 5000 sqm with new automatic machines and new storage silos. After the investment of 2022 the production facilities reach the 10.000 sqm. The company follows all procedures according to EU regulations.

The quality of the seeds used in our products is certainly the key to the company success. Raw materials are carefully selected and imported from countries all over the world. They are thoroughly controlled for humidity, toxins, temperature and passed through cleaning and fumigation procedures, further more natural protectors are added against insects, parasites and fungi.

Thanks to a technical collaboration with Veterinaries and Breeders (from Belgium, Greece, Egypt, Middle East), we offer the Best Bird Nutrition and we export in 40 Countries. Mixtures for different types of Pigeons, Canaries, Budgies, Parakeets, Parrots, Wildbirds, Rodents etc., are in our range. Also, we produce in several clients with Private Label products.

In addition to Bird food production, you will find a standard range of Dog and Cat dry food that produced in Greece. Puppy, Energy, Adult, Adult Power etc. are some of the Dog food products as well as Cat dry food with Chicken or Fish taste.

Furthermore, you will find a quality range of plastic Bird Accessories.

We participate directly in several exhibitions such as Interzoo (from 2012), Pets Today, Zootechnia etc., in Dog/Cat/Bird Festivals and through our distributors in different country exhibitions.

We invite you to come and visit us in our facilities and give us the opportunity to present you our quality products.

The Team of Farma Friends

## Procedures

The mixtures consist of quality selected seeds from all over the world.

Upon receipt of the seeds, sampling is done from 3-5 points and we control for humidity, temperature, smell and insects. We have product quality certificates from all the suppliers before loading as to ensure the quality of them. We also do laboratory control for several toxins and fumigation process as to ensure that the raw materials are in well conditions to be final product.

The seeds are cleaned in 3 places during production from dust, foreign matter, peels, etc.:

- A) Upon receipt with special fans
- B) Passing all the seeds through the special cleaning machines
- C) During the packaging (after the mixture is ready) with special cleaning machines

After the seeds are cleaned, they are packed in Big Bags and stored.

The main machine consists of 40 different silos and is powered by the ready, cleaned Big Bags with seeds. Using a computer, we select the recipe that will be executed and the seeds proportionally fall into the weighting machine and then into the Mixer.

During the mixing process, we add special natural products that prevent the food from fungi, mold, insects etc. Then the mixer feeds the weighting machine and the food is weighted, packaged and placed on pallets. Special marking stickers are placed during packaging and final the products are ready for delivery.

Throughout the production process, the human factor does not intervene (production takes place automatically), so the customer always receives the same product.

The customer can choose between the variety of Farma Friends mixtures or even his own mixtures, since we can execute any recipe.

Also the customer can choose between Farma Friends Brand or his own packaging ( PRIVATE LABEL).

The company follows HACCP with all procedures according to EU regulations, such us 183/2005 rule of European Union ( our code is 00320540000036) and 2016/2031 rule of European Union (our code is GR54022005 ) etc.
