Remote Connection Management

Remote Connections & Passwords. Everywhere!

Remote Desktop
Manager

Centralize, Manage and Secure Remote Connections.

✓ Manage, store, and secure access to remote connections, privileged accounts, passwords, and documents.

✓ Centralize all remote connections on a single highly secure platform.

✓ Launch direct connections to privileged sessions.

✓ Integrate tools and services from a wide selection of supported technologies.

✓ Control user access to privileged accounts with a role-based access control system.

Remote Connection Management

Securely centralize, manage, and launch all your remote connections from a single platform.

IT Team Solution

Fully integrated features for teams, allowing easy sharing and user administration.

Password Management

Store all your passwords and credentials in a secure and centralized vault or use your existing password manager, such as KeePass and many others.

Ease of Management

Ease the administrative burden of managing permissions and accounts. Create templates to simplify management.

Secure Access to Critical Assets

Protect your connections from various security attacks and insider threats using a granular protection access control.

Audits and Reports

Perform audits and generate customized reports based on specific criteria.
