## **High-Performance CLP Gun Oil for Modern Weapon Systems**

**BALLISTOL introduces GunEx MIL**

*New formulation combines military specifications with innovative lubrication performance – optimally engineered for current NATO weapon systems such as the G95.*

BALLISTOL GmbH, one of the leading manufacturers of firearms and equipment care products with more than 120 years of experience, introduces GunEx MIL, a high-performance gun oil specifically developed to meet the demands of modern military and tactical weapon systems. The new product forms the core of a comprehensive lubrication and cleaning system and is designed for military forces, security personnel, law enforcement agencies, special units, and discerning sport shooters.

### **Engineered for the Highest Demands Under Extreme Conditions**

GunEx MIL fully complies with the technical delivery specifications of the German Armed Forces (BW-TL) and has been specifically developed for the lubrication, preservation, and cleaning of NATO weapons. The oil delivers reliable performance across an exceptionally wide operating temperature range from -54 °C to +150 °C, ensuring reliable performance in both arctic conditions and tropical climates.

"With GunEx MIL, we are setting new standards in firearm care and functionality for professional users," explains Gerd Simon, Head of Sales and Firearms Care Expert at BALLISTOL. "The product combines outstanding wear protection and reliable performance with excellent corrosion resistance, providing exactly what operational forces need under the toughest conditions, whether in the mountains, the desert, or in seawater."

### **The Optimal Solution for Modern AR Platforms**

One of GunEx MIL's particular strengths lies in its precise optimization for current weapon systems such as the German Armed Forces' new G95. Unlike the previous standard-issue rifles G3 and G36, the G95 is based on an AR-15 platform featuring an indirect gas-operated system and a buffer system integrated into the stock. This design requires more consistent and reliable lubrication than older systems - an exact requirement that GunEx MIL fulfills perfectly.

## Press release

### Technical Superiority in Detail

The new high-performance gun oil meets all challenges and specifications required by Western standards (see box).

The innovative formulation of GunEx MIL is distinguished by a range of technical features:

- Outstanding wear protection for maximum lifespan of mechanical components
- Excellent corrosion protection properties for long-term operational reliability
- Solvent-free and odorless for comfortable handling
- Optimized viscosity even at extreme temperatures down to -54 °C
- Compatible with mineral oils and commonly used solvents, ensuring excellent miscibility

#### TECHNICAL SPECIFICATIONS:

- TL9 150-0078,7
- NATO code: S-761
- BW code: 0Y1045
- Supply number (NSN):  
9 150-12-320-9858

Also meets requirements according to:

- S-758
- MIL-PRF-63460G

“The requirements of modern weapon systems have evolved,” Simon explains. “With GunEx MIL, we have developed a product that not only delivers the traditional strengths of BALLISTOL oils: cleaning, lubrication, and preservation, but also meets the specific lubrication demands of today’s AR-based platforms.” In combination with GunCer, BALLISTOL’s ceramic-based high-performance lubricant, this results in a maintenance system that delivers optimal performance, particularly under high firing loads and in Central European operating climates. While GunEx MIL stands out for its wide temperature range and reliable base lubrication, GunCer provides additional lubricating performance in highly stressed areas.

### Proven Quality Meets Innovation

As part of the BALLISTOL product family, GunEx MIL embodies the quality promise of a brand that has earned the trust of professionals and enthusiasts for generations. The combination of traditional expertise and cutting-edge research makes GunEx MIL the first choice for anyone who relies on reliable firearm performance under all conditions.

This gun oil is part of a comprehensive care and maintenance system offered by BALLISTOL for professional users. Complementary specialized cleaning products including bore cleaners, parts cleaners, suppressor cleaners, the proven JW-gun care system and gun grease are also available. Together, these products form a complete CLP system (Cleaning, Lubricating, Protecting) that meets all the demands of modern firearm care.
