

Always one step ahead with ADL

The new proactive solution Activities of Daily Living (ADL) and the specially developed ADL app relieve and support carers while actively involving relatives in the care process.

Cloud-based and
adaptive WEB platform

Early detection
of critical situations

Smartphone APP
for relatives
and care services

Activity of Daily Living

ADL turns data into life-saving information and provides helpful insights for optimal care. Both the smartphone app and the web platform help to analyse the data.

- The sensors record daily activities.
- A chronological overview of all activities is created.
- Clear reports for quick analysis.
- Rule-based messages via SMS, e-mail or PUSH message can be configured.
- Data is intelligently processed and analysed in order to send smart alarms' automatically.
