

- SOVEREIGN IDENTITY MANAGEMENT

Manage Identities. Reduce Risk. Comply with Regulations.

Manage access rights and data with precision and efficiency. Garancy's automated identity management enables companies and government agencies to manage digital identities in an audit-compliant, flexible, and future-proof manner.

This applies to employees, partners, and service providers as well as to service accounts and APIs.

Roles Change. Control Remains.

Automated identity management

Creation of valid authorizations based on rules and roles plus precise provisioning into the connected systems

Efficient user lifecycle management

From onboarding to departure – fast, transparent management of employee access rights including automated recertification

Reports on identity structures and access rights

Multidimensional analyses to review access rights structures in the company and to identify potential risks

Cross-platform password management

Seamless, automated synchronization of password changes and resets with all connected systems and applications

Your Benefits with Garancy

Secure thanks to "Made in Germany"

Our software is developed in Germany and is subject to strict European data protection regulations. There are no hidden access paths to your data.

No obligation to use the cloud

Whether you run Garancy on-premises or in the cloud is entirely up to you. You can switch at any time without losing any functionality.

Flexible licensing

Subscription or purchase: Choose the licensing model that best fits your budget planning.

Direct points of contact

At Garancy, tickets don't have to travel across continents: Short communication channels and accessible teams that speak your language ensure quick coordination.

Bridging the Gap Between Business and Security

Provisioning

- Integration and management of IT applications using the widest selection of out-of-the-box connectors
- Flexible and highly scalable synchronization of identity management with the target systems to be integrated
- Provisioning, consolidation, and synchronization of access rights

User Management

- Automatic import of HR data
- Support for the entire employee lifecycle (new hires, transfers, departures)
- Various user types, such as internal and external employees or APIs

Access Governance

- Role lifecycle management with role hierarchies
- Automatic assignment to roles based on identified user profiles
- Enforcement of SoD (Segregation of Duties) rules
- Control of authorization based on roles and internal IT security policies

Audit und Security

- Definition of audit checks for assigned access rights
- Single point of information and enforcement of access policies
- Independent management of multiple properties via a central IAM platform

● CONNECTIVITY

Quickly Integrated. And Ready to Run.

Thanks to numerous standard connectors, you can seamlessly integrate Garancy into all existing IT environments. And the universal connector "uConnect" enables you to flexibly connect hundreds of additional systems and custom use cases – without the need for complex in-house development.
