

# VACUUM

# FX JET

FOR  
HIGH-PRESSURE  
DIE CASTING

# SINCE 1946

Since 1946, Fondarex has contributed to the successful implementation of thousands of projects in vacuum die casting.

Initially established as a high-pressure die casting (HPDC) foundry in Montreux, Switzerland, for over 30 years, the company produced high-quality castings.

In 1952, the first vacuum system was developed in-house for the foundry, with the aim of optimizing the part quality. During the last 45 years, the company has continuously expanded – not only in terms of customers, whose number today exceeds 1000, but also its consistent focus on product development, with an emphasis on reliability. Fondarex differentiates itself by offering its customers comprehensive advice and technological support for each individual project, based on its extensive expertise and experience. Our goal is for foundries, to be able to produce the best-quality parts as efficiently and cost-effectively as possible.

Fondarex made a great step forward in expanding the company by creating 2 new entities: “Fondarex Europe GmbH” in Dillingen, Germany, and “Fondarex Wuxi Machinery Co., Ltd” in Wuxi, China. Both new sites will have a production and a warehouse to better serve our customers.

Last but not least, over the last two years Fondarex developed a new innovative jet cooling system called FX JET so we could meet our customers’ needs more effectively in terms of die cast part quality. This new development is part of a new Fondarex strategy which will soon be rounded out by complementary technologies.

These achievements are made possible only through the dedication and expertise of Fondarex’s employees and, of course, our customers.

Our most heartfelt **THANK YOU** for your trust and loyalty throughout these 75 years.

D. Baumgartner  
CEO

K. Baumgartner  
President

# FONDAREX GROUP

As part of its plan to strengthen its presence and customer support, Fondarex SA founded Fondarex Europe GmbH in Dillingen, Germany, and Fondarex (Wuxi) Machinery Co., Ltd in Wuxi, China.

## SWITZERLAND

The headquarters of Fondarex are where we develop our vacuum technologies for high-pressure die casting and where our production site and warehouse are located.

## EUROPE

Created in 2022 in Dillingen, Germany, Fondarex Europe GmbH aims to better serve our European customers in collaboration with our existing representatives. This Fondarex subsidiary will provide the newly developed FX JET as a complementary product to our vacuum technology. With the commercialization of the FX JET in April 2023, Fondarex will offer even more when it comes to the quality of die-cast parts.

## ASIA

After 30 years of building a reputable customer network in China, in 2021 Fondarex SA launched Fondarex (Wuxi) Machinery Co., Ltd in Wuxi, China. This Fondarex subsidiary successfully developed and produced an unique range of vacuum systems for the Chinese local market that meet the quality standards of our Swiss headquarters. Furthermore, we are able to provide the best technical service and can deliver spare parts throughout Asia more quickly.

# FX JET

“Achieve castings with quality” This motto led Fondarex to develop a new jet cooling concept with disruptive technology and implement a novel strategy for managing jet cooling.

Taking into account the best practices of the HPDC industry, this unit will help foundries to be more competitive on the current market with its challenging conditions.

The purpose meets the need –  
from simple castings all the way to the Giga sizes.

- 2 to 8 cooling channels for up to 64 controlled jet nozzles (upgradable)
- Dissipated heat and flow rate are monitored per nozzle and production cycle
- Compatible with conventional jet nozzles
- Easy to use and maintain
- Energy-efficient pump technology

Traceability for all  
production cycle/cast  
parts

Automatic filter  
contamination  
surveillance

Error diagnostic  
display

All jet nozzles are  
temperature and flow  
controlled

From 2 to 8 cooling  
channels (16 to 64  
controlled jet nozzles)

Max. flow rate  
up to 100 l/min

Removable control  
panel

Real time data  
transmission to  
external systems

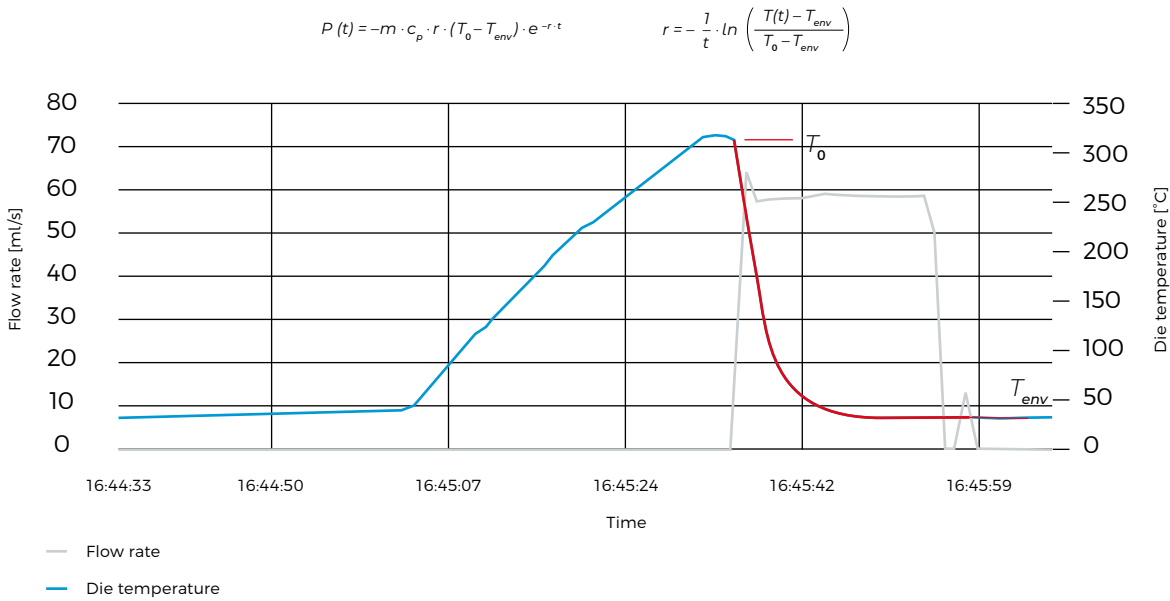

CYCLE  
RECORDING

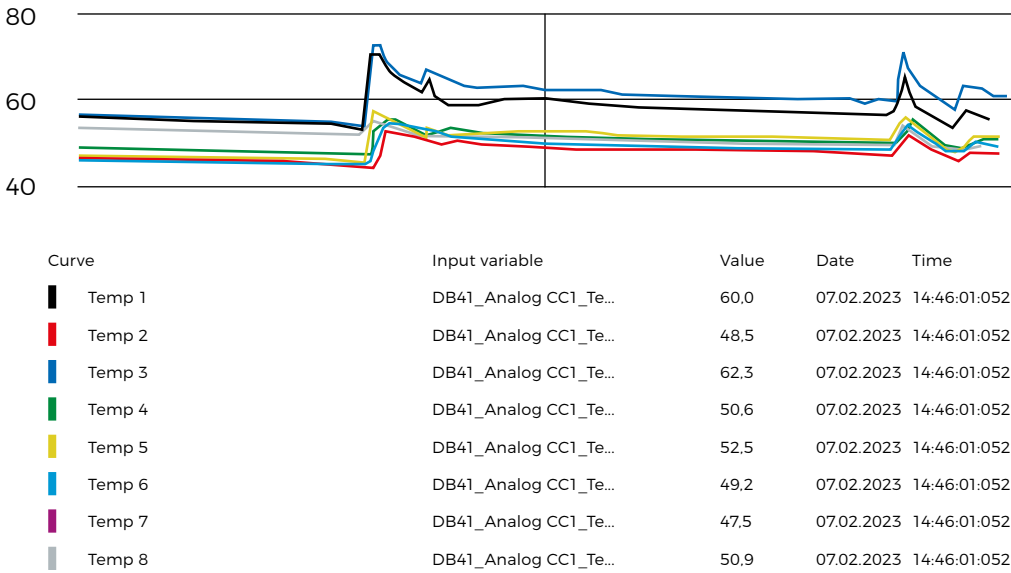

EVALUATION OF  
COOLING CAPACITY

Determination of heat dissipated per jet nozzle and production cycle

INDIVIDUAL CURVE  
TEMPERATURE PER JET

Recording of temperature-time and  
flow-time curves for each jet nozzle

# ELECTRIC

## MOBILE

This new, fully electric vacuum system concept allows up to 3 electric units to be connected together on 1 DCM.

- Compact solution
- Simplified interface
- Affordable unit
- No installation assistance required
- No need for compressed air
- Upgradable up to 3 vacuum channels
- Compatible with any DCM
- Available for Zamak applications

## POSSIBLE CONFIGURATIONS

Start with 1 controller unit and add 1 or 2 additional units at any time.

1 UNIT

2 UNITS

3 UNITS

# ONE / TWO

## MOBILE / CELL / CENTRAL

The Fondarex ONE system controls 1 vacuum valve or 1 chill vent and is suitable for die casting machines up to 800 t.

The Fondarex TWO system controls 2 valves or 2 chill vents and is recommended for die casting machines up to 1400 t.

- 1 or 2 vacuum channels
- Easy-to-install system
- Compatible with any vent or mechanical valve
- Easy to use and maintain
- Available for Zamak applications

Curve display of vacuum measurement

Vacuum measurement in the tank

Filter contamination control per cycle

Valve / vent profile control to ensure performance

Internal storage of 50 production recipes

Error diagnostic display

MOBILE

CELL

CENTRAL

HOT-CHAMBER

# ZAMAK

## MOBILE / EXTENDED / CENTRAL

Based on the FX Premium concept, this unit is specifically adapted for the hot-chamber die casting industry.

- Fast vacuum opening
- Vacuum control
- Data transfer
- OPC UA ready
- Compact design

Curve display of vacuum measurement

Vacuum measurement in the tank

Filter contamination control per cycle

Internal storage of 500 production recipes

Error diagnostic display

Vacuum control (3 positions)

Evacuated air volume

Leak test / leak detection

Separate electrical and pneumatic cabinets

Wire interface compatible with the Highvac Premium series

Profinet interface

OPC UA ready

Extended version with flexible configuration

MOBILE

EXTENDED

CENTRAL

## FX PREMIUM MOBILE

Since the launch of the Highvac series in 2010, the Highvac Premium system has been internationally recognized as the quality standard for vacuum-assisted high-pressure die casting. Now being replaced by FX Premium.

MOBILE

## FX PREMIUM EXTENDED

Full flexibility of configuration and placement. Simply position the modules to best suit your layout. To ensure the best performance and quality, link the vacuum channels closer to the die.

# FX PREMIUM

## CELL / CENTRAL

The FX Premium electrical and pneumatic cabinets can be purchased for Cell or Central solutions. The vacuum tank and pump sizes will be configured according to customer needs.

CELL

CENTRAL

### FEATURES

An update and redesign of the Highvac Premium series which offers increased performance (larger tanks and pumps) and optimized control options:

Curve display of vacuum measurement

Vacuum measurement in the tank

Filter contamination control per cycle

Valve/vent profile control to ensure performance

Internal storage of 500 production recipes

Error diagnostic display

Vacuum control (3 positions)

Evacuated air volume

Leak test / leak detection

Wire interface compatible with the Highvac Premium series

Profinet interface

OPC UA ready

Separate electrical and pneumatic cabinets

Extended version with flexible configuration

# MODULAR

## CELL / CENTRAL

A new vacuum concept to meet the demands of the Giga Era and greater casting size.

The Fondarex Modular system allows independent placement of the modules.

The user interface has also been completely redesigned for ease of operation, offering more precise control and comprehensive process analysis.

The system comes with all of the standard controls and features for which Fondarex machines are known.

Supports not for sale

# MODULAR

## FEATURES

Curve display of vacuum measurement

Vacuum measurement in the tank

Filter contamination control per cycle

Valve/vent profile control to ensure performance

Internal storage of 500 production recipes

Error diagnostic display

Evacuated air volume

Leak test / leak detection

Vacuum in shot sleeve

Wire interface compatible with the Highvac Premium series

Profinet interface

OPC UA ready

Software upgradable at any time

Hydraulic valve management

## OPTIONS

### INDUSTRY 4.0

A new way to manage, communicate and handle data through integrated vacuum process statistics and quality reports. This option includes a web dashboard to follow your production from your laptop.

### REAL-TIME VACUUM CONTROL

The butterfly valve precisely controls evacuated airflow. The high-speed control is done independently through each vacuum channel.

### AIRFLOW MEASUREMENT

The module measures evacuated airflow and air volume per vacuum channel.

### AIR HUMIDITY

Air humidity is measured by sampling in a dedicated tank before injection.

### INDIVIDUAL VACUUM CHANNELS (up to 8)

Individual vacuum channel boxes can be placed wherever needed around the DCM, allowing you to work as closely as possible to the mold.

### REMOTE CONTROL PANEL

Always keep an eye on the vacuum process data by positioning the remote control panel as close as possible to the operator.

### ID KEY

The ID key enhances parameters and data security with up to 4 different access levels. Each level has 1 dedicated key.

# GIGA CASTINGS

The Fondarex Modular Cell is the Giga Casting vacuum solution for high-pressure die casting.

This modular concept incorporates robust, modern technology to guarantee ongoing high-performance use.

# STEEL VENTS

The aerodynamic profile of our SCS steel vent ensures both efficient air evacuation and fast alloy solidification.  
The SCS steel vent delivers reliable performance for over 400,000 shots.

# KINETIC VALVES

A new family of mechanical valves that give you high evacuation capacity, high reliability and compact size at a competitive price.

- The proper way to reach high vacuum
- Up to 300 mm² evacuation capacity
- Compact design for better mold integration
- Less weight for easy handling
- Available in 4 sizes and 7 evacuation sections

**LOW AND EASY MAINTENANCE**

Simplified mechanism to reduce the number of moving parts and to lower maintenance costs.

**INTEGRATED COOLING CIRCUIT**

Available on:

**KINETIC VALVES**  
**100 / 75**  
**300 / 200**

**REDESIGNED FILTER**

New robust filter for easy and quick maintenance.

# HYDRAULIC VALVE

The redesign of the hydraulic vacuum valve features high evacuation capacity, great reliability, easy integration into the mold and smart control of the evacuation piston stroke.

- Vacuum valve controlled by a hydraulic cylinder
- 300 mm<sup>2</sup> vacuum valve evacuation capacity
- Reactive manifold connected to the hydraulic circuit of the DCM
- 50 ms hydraulic valve closing time
- Stroke control of the evacuation piston through the Fondarex Modular unit

# TECHNICAL SUPPORT

Our experienced engineers provide support at your production sites.

We take care of  
mold design,  
installation / start-up,  
on-site training  
and maintenance.

Your continued satisfaction is our primary goal.

## REMOTE ASSISTANCE

Our experts can provide real-time instructions and guidance for faster troubleshooting.

# VACUUM APPLICATIONS

## CHANNEL DESIGN

Vacuum application studies are fundamental to good vacuum integration into your processes. With over 5000 successful projects, Fondarex is the leading specialist in vacuum channel design.

## SIMULATION

We constantly strive to discover new possibilities. To better understand complex dynamic flows inside the cavity, please ask Fondarex!
