

JCM TECHNOLOGIES CHAMPIONS COMPREHENSIVE ACCESS CONTROL SOLUTIONS

Last 19 through 23 February, Stuttgart hosted the long-awaited R+T fair, the leading international fair specialised in blinds, doors, gates, and solar protection systems. After a temporary break, R+T is back, reaffirming its position as the leading industry fair. This was a key event to view trends and to spot new opportunities, as well as a showcase to display the latest developments in the sector.

JCM Technologies attended this event. Our participation provided new solutions that set trends in access control maintenance. What is more, the long-awaited return of R+T coincided with a very special celebration for JCM Technologies: the company's fortieth anniversary. A proven track record full of innovation has led us to develop solutions like the Radioband, which has become a standard for the entire automatic door sector in terms of security.

The reliability of 40 years of experience

The key to what sets JCM Technologies apart within the access control sector is the global vision of its solutions, which value every player involved in the use and maintenance of access points. Our good relationship with our clients and actively listening to their concerns and needs means that JCM Technologies solutions provided added value. Our clients recognise this, and we offer options for technological improvement that make their daily activity easier and more profitable.

imotion, the comprehensive access control solution

JCM Technologies is specialised in products and solutions for access control, door automation, security elements, and manoeuvre signalling elements for all kinds of doors, whether industrial, residential, or communal.

imotion is the solution that best adapts to access control needs for neighbourhood associations. It is a comprehensive solution that meets the needs of door maintenance personnel, association administrators, and the residents themselves.

imotion is a solution designed for everyone. One of the basic differences in this solution is that it allows end users to open the door from their phone and directly contact the door manager in the event of an incident.

For door maintenance personnel, this management tool means they can optimise resources devoted to door maintenance, as well as provide a more effective service, since it avoids unnecessary trips to doors that operation correctly, in addition to other advantages.

The imotion solution allows maintenance personnel to verify the status and operation of the doors from any location, see the door's life cycle, manage activation hours, and manage operators, registering or cancelling them from the office and in real time. They can grant user management to neighbourhood administrators without losing control over the door.

For neighbourhood association administrators, imotion provides greater control and security, avoiding typical incidents like key duplication or loss. Moreover, it provides remote incident management like granting access permission in a fast and efficient way.

All these functions make imotion a 360 solution that remembers everyone who interacts with the door, so that the benefit the solution provides is global.

With the imotion solution, JCM Technologies is championing a complete solution focused on time and resource management. It provides a vision that goes beyond access control and technology, also providing a management system that makes maintenance easier and increases security.

If you would like more information about JCM Technologies solutions, please contact our team. Like always, they will be delighted to answer your questions. You can also visit our webpage: www.jcm-tech.de
