

inLine

Mechanical bottle unscrambler

The simplest solution on the market

The in-Line series has a wide range of systems and models of machines for unscrambling bottles of different dimensions, characteristics and materials, with speeds that can be adapted to the different production needs.

Fully intuitive and with excellent ergonomics sorting technology thanks to the complete accessibility and visibility of the process. The optimization of the format elements, the absence of adjustments, the easy access to the machine and the lightness of the accessories allows a rapid tool-free format changeover.

Thanks to the absence of compressed air nozzles or dynamic rejection elements, it provides excellent care to the packages while minimizing the use of energy, the noise level and the hygienic risk of these.

Easy to use

Quick format change

Tool-free format change

Adjustments free

Permanent bottle vision

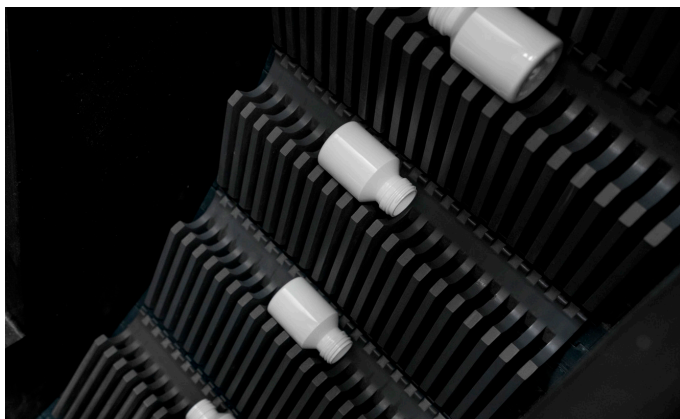

Extreme care of the container

Small footprint

Compressed air free

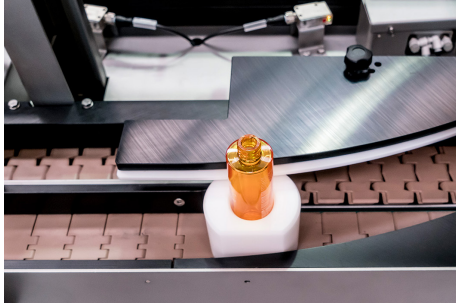

Technical specifications

Max. bottle volume	up to 2 L
Max. mechanical performance	up to 600 bottle/min

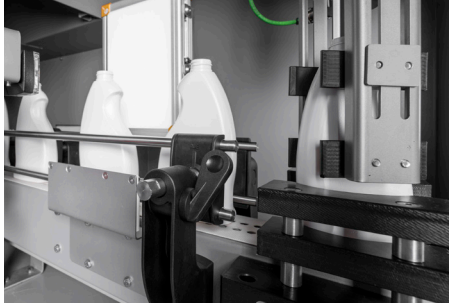

inLine Capabilities

Easy handling of the entire line.

Due to the modularity of the in-Line series, new configurations can be integrated.

Puck introduction system

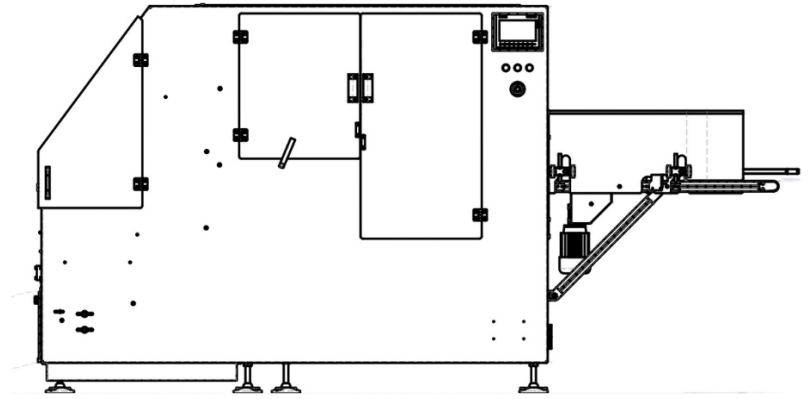

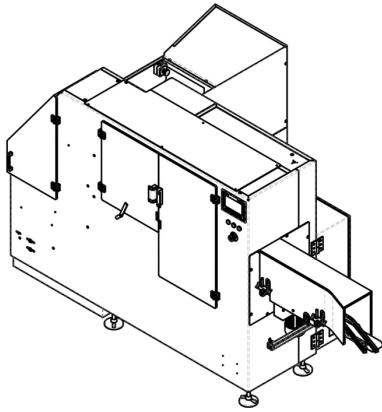

Orientation system

Cleaning system

Most compact solution for sorting
