Established in **1971** and always based in Casale Monferrato, Italy, we are specialized in **manufacturing of components in copper and aluminum for the refrigeration and air-conditioning industry**. With decades of research and through continuous investments we acquired a huge experience and reliability designing of filter driers. Our production techniques permit a **superior quality taper**, particularly resistant to extreme stress and the higher working pressure. All the machinery and the equipments are **assembled and designed in house** for our specific requirements, and permanently controlled by our technical dept. All of our strategic suppliers are quality certified and the raw material is subject to strict controls at the entrance of our warehouse. The best quality, high technology and promptness in service distinguish us on an ongoing basis.
