WERZALIT

The original window sill

Whether new build or renovation - a window sill must meet the highest technical standards in construction. Window sills from WERZALIT are manufactured in a patented process as high-pressure moulded parts. They are resistant to building moisture, don't warp and are long-lasting. WERZALIT window sills stand for quality in every respect.

When it comes to interior design, choosing the right window sill is also a question of aesthetics. Whether as a subtle room element or a striking accent - WERZALIT offers you a large selection of shapes, decors and dimensions. A choice of window sills are available including exclusiv with its classic edge form, compact with a simple, modern design and expona with right-angled, ABS-coated front edge, as well as exclusiv-drop-noses and compact-drop-noses with screens.

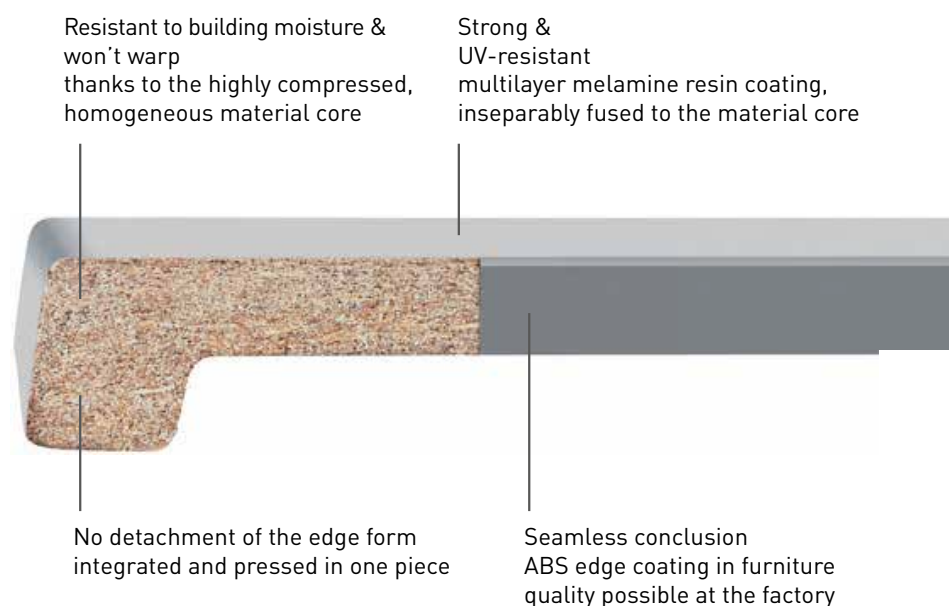

WERZALIT window sills are made from PEFC-certified wood and high-quality resins. WERZALIT has over 50 years of experience in the production and use of moulded parts. This offers advantages for products when it comes to the selection of raw materials and in manufacturing.

The advantages at a glance

- 25 year original WERZALIT guarantee
- Large selection of shapes, decors and dimensions
- Delivery lengths up to 6,00 m
- High quality, long lasting
- Won't warp
- UV-resistant
- Resistant to building moisture
- Food safe
- Easy to clean
- No health risks
- Environmentally friendly
- PEFC certified

exclusiv

The original

exclusiv is the classic series with a typical, integrated moulded edge. It is available as a window sill or intelligent system window sill. Different colours, decors and three different surfaces allow your personal interior design concepts to be brought to life.

- WERZALIT material
- 3 different surface structures
- 27 decors in total
- Also available as a system window sill

P. 6-7

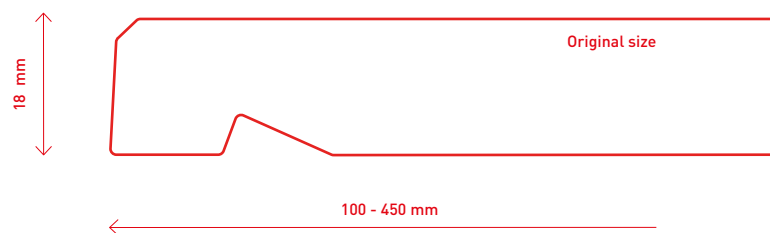

compact

Architectural design language

With its striking chamfer on the front edge and its slim appearance, the compact interior window sill displays a contemporary, linear look. A flush wall finish is also possible.

- WERZALIT material
- Very slim design
- Flush wall finish possible
- Also available as a system window sill
- Attractive decors to choose from

of our
products.

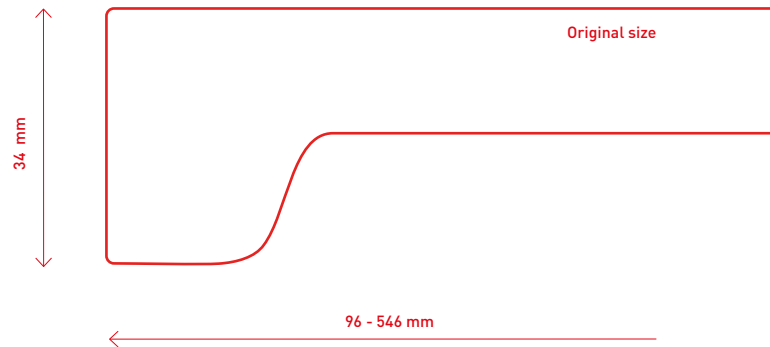

expona

With the individual edge

expona window sills offer a wide range of fine stone and warm wood decors. This allows greater design effects to be achieved with interiors with reduced resources. Sometimes classic, sometimes modern, sometimes reserved, sometimes cutting edge. The proven mould-ed edge is a trademark of WERZALIT quality.

- WERZALIT material
- Front and side surfaces in a wide range of colours
- 27 decors in total

P.10-11

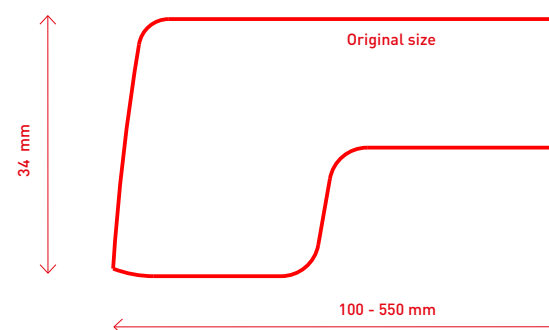

All decors can be found on pages 12-14.

exclusiv is the classic series with a typical, integrated moulded edge. It is available as a window sill or intelligent system window sill. Different colours, decors and three different surfaces allow your personal interior design concepts to be brought to life.

exclusiv indoor window sill

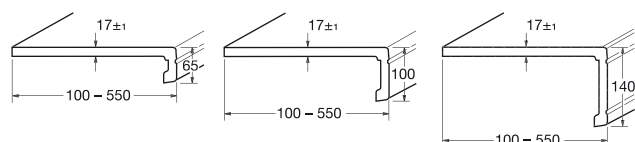

The 34 mm thick moulded edge gives the high-quality exclusiv window sill its classic look. Thanks to material properties such as strength, warp-resistance and low-maintenance, this window sill has proven itself in both private and public buildings.

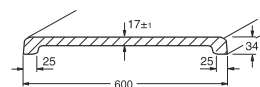

exclusiv-drop-noses system window sill

The exclusiv-drop-noses system window sill with screen offers the best conditions for building projects or renovations with easy-to-install window sills. The screen means it is ideal as a slide-over solution. They can be fitted with integrated radiator cladding or with installation and cable channels.

Standard lengths: 6000 mm without end cap
Fixed size: any size up to a maximum of 6 m in length including the matching end edge

compact

Architectural
design language

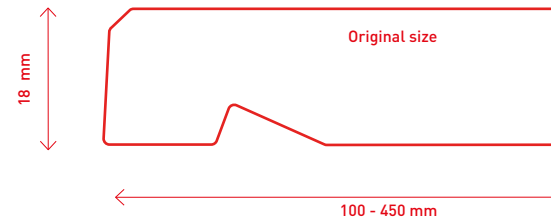

All decors can be found on pages 12-14.

The compact series looks great with its linear and discreet design language.

compact indoor window sill

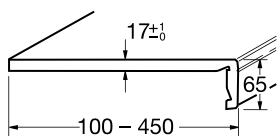

With its striking chamfer on the front edge and its slim appearance, the compact indoor window sill displays a contemporary, linear look. Thanks to its material properties, it can be used in both private and public areas. A flush wall finish is also possible.

compact-drop-noses system window sill

The compact-drop-nose system window sill offers an excellent and uncomplicated solution for both new builds and renovations. Thanks to the screen, it can be used as a slide-over for window sill renovations, thus avoiding knocking walls. It can also be fitted with radiator cladding or house wiring and cable ducts.

Standard lengths: 6000 mm without end cap
Fixed size: any size up to a maximum of 6 m in length including the matching end edge

expona

With the
individual edge

All decors can be found on pages 12-14.

The expona indoor window sill looks great with its right-angled edge, which is also available in different decors.

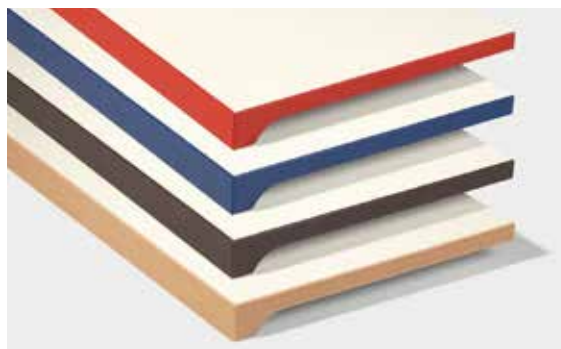

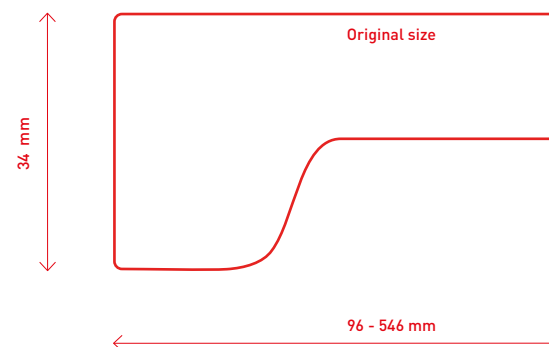

Individual customisation

expona is delivered made-to-order. We coat the front and side edges and cut the width and length for you ex works. With its large variety of dimensions, expona can be used for very wide and deep window fronts.

New edge, new look

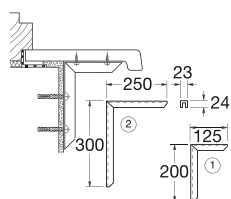

Thanks to its simplicity and elegance, expona has all the hallmarks of a modern classic. The straight front edge with ABS edge coating is available in the same decor as the surface or in 4 special decors.

Standard lengths: 6000 mm without end cap
Fixed size: any size up to a maximum of 6 m in length including the matching end edge

Made to measure

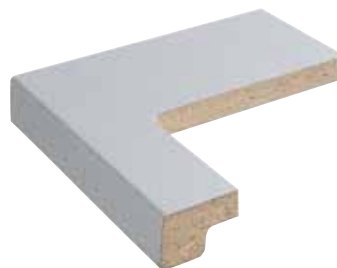

Benefit from the unique WERZALIT window sill preparation service for the exclusiv, compact and expona series. We fulfil your individual preparation requests from cutting to edge coating with the highest manufacturing precision. This not only saves work, but also money. And the quality remains exceptional right down to the smallest detail.

Made-to-measure cutting

If requested, WERZALIT supplies window sills cut to size - if necessary with the relevant notches, recesses, etc. In contrast to classic yard goods, you only pay for what you really need - without worthless leftover pieces. This save you a lot of work and eliminates the risk of waste.

Edge coating in furniture quality

WERZALIT is the only manufacturer to coat open cut edges for the exclusiv, compact and expona window sill series. For the exclusiv and compact window series, this ABS edge coating is selected to match the ordered window sill decors and for the expona it can be freely selected. It guarantees a seamless finish in furniture quality. Measured against the reduction in effort and improved results over manual installation, this small surcharge is definitely worth it.
