# FACHAGENTUR NACHWACHSENDE ROHSTOFFE E. V. (FNR)

Agency for Renewable Resources

AT A GLANCE

With support from

Federal Ministry  
of Food  
and Agriculture

Fachagentur Nachwachsende Rohstoffe e.V.

by decision of the  
German Bundestag

# AGENCY FOR RENEWABLE RESOURCES (FNR)

FNR was founded in 1993 on the initiative of the German government to coordinate research, development and demonstration projects and thus contribute to the development and use of renewable raw materials for a sustainable bioeconomy.

For more than 30 years, FNR has primarily been funding projects on behalf of the Ministry of Food and Agriculture (BMEL), but also other federal ministries to promote the sustainable production and utilisation of renewable raw materials. Today, topics such as the conservation and appropriate use of carbon-rich ecosystems for climate protection are playing a growing role in its work.

*Funding research for a sustainable future*

Due to the wide range of tasks and topics, FNR combines expertise in the material and energetic utilisation of renewable raw materials, sustainable forest management and wood utilisation. FNR implements measures for peatland protection, peat use reduction and emission reduction in the fermentation of farm manure. Its portfolio also includes participation in European and international projects and committees.
