

# FLEX PRODUCTS OVERVIEW

## COMPLETELY SAFE PROCESS

No operators/products cross contamination

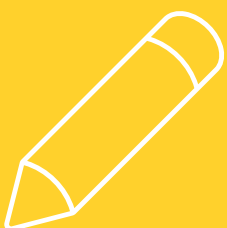

## SINGLE-USE CONTAINMENT

No cleaning effort

## NO RECERTIFICATION

Smart containment

## CUSTOMIZED PRODUCTS

Adapted to your process

### FLECOBOX ISOLATOR

- For dispensing, sampling, and material feeding as well as for use during documentation processes
- To ensure simple handling and workplace safety
- Compatibility with the Material Transfer System allows to transfer the weighed products directly to a process unit

### MATERIAL TRANSFER SYSTEM

- For the transfer of highly active substances (OEB 5)
- The perfect and safe interface between process units or isolators
- Up to 15 docking and undocking cycles possible in one operation

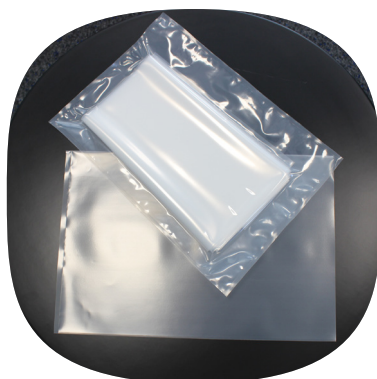

### FLECOLINER

- Continuous Liners for the filling of highly toxic products
- Large quantities of toxic substances can be filled directly
- Meets Requirements for Containment Level OEB 5 (depending on the closure system)

### VACUUM BAG

- Can be used mainly in tablet production, or where negative pressures occur
- The same interface of the Material Transfer System is used and thus achieves Containment Level OEB 5.

### LOW-PARTICLE BAGS

- For pharmaceutical applications, fine chemicals, food and cosmetics
- Manufactured under cleanroom class ISO 7 in various sizes
- Use the Tric connection for safe transferring

### COMPOUNDING

- Customised compound by mixing up to 12 material components and producing the compound in clean rooms under special hygienic conditions
- The Polymers properties vary in conductivity, abrasion resistance, structural behavior and color by adding additives, filler materials and reinforcing agents.
