

New Warrior was established in 2010 in Dongguan City, Guangdong Province, China. Our focus is on manufacturing high-pressure air compressors with an emphasis on high quality, superior design, precision production, excellent performance and customer satisfaction in sales and after-sales service. In addition to our industrial state-of-the-art R&D and production center with over 50 highly skilled engineers and technicians, the company also owns air pump fatigue testers, 10,000 psi pressure testers, multi-function compressor test lines, 110-Volt power converters, measuring microscopes, and other advanced devices required in the compressor and manufacturing industry. All these factors contribute to our annual output of 40,000 compressors, 20,000 hand pumps and continuous quality control, innovation and R&D.

Since 2010, the company has maintained an unflinching commitment to developing and manufacturing the highest-quality air compressors. Our products include a 4500psi double-cylinder air compressor, mini-compressor, portable 12-Volt HPA compressor, and a water-cooled PCP hand pump. Our compressors are mainly used for air gun shooting, paintball guns, toy air guns, pressure tests, sealing tests, leak tests, military and national defense uses, and other fields where compressed air is needed. While we have manufactured products for large international companies that have sold our products globally, including in America, the UK, Indonesia and many other countries, the designs and patents belong to New Warrior and are the result of New Warrior's superior engineering and R&D. In addition, New Warrior Brand is now sold on every continent!
