# Unleash the Power of AI **Safely!**

## LLM-based AI

AD VERBUM TMS is powered by **Large Language Models (LLM)**, which avoids all the pitfalls of Neural Machine Translation (NMT) and regular Machine Translation (MT).

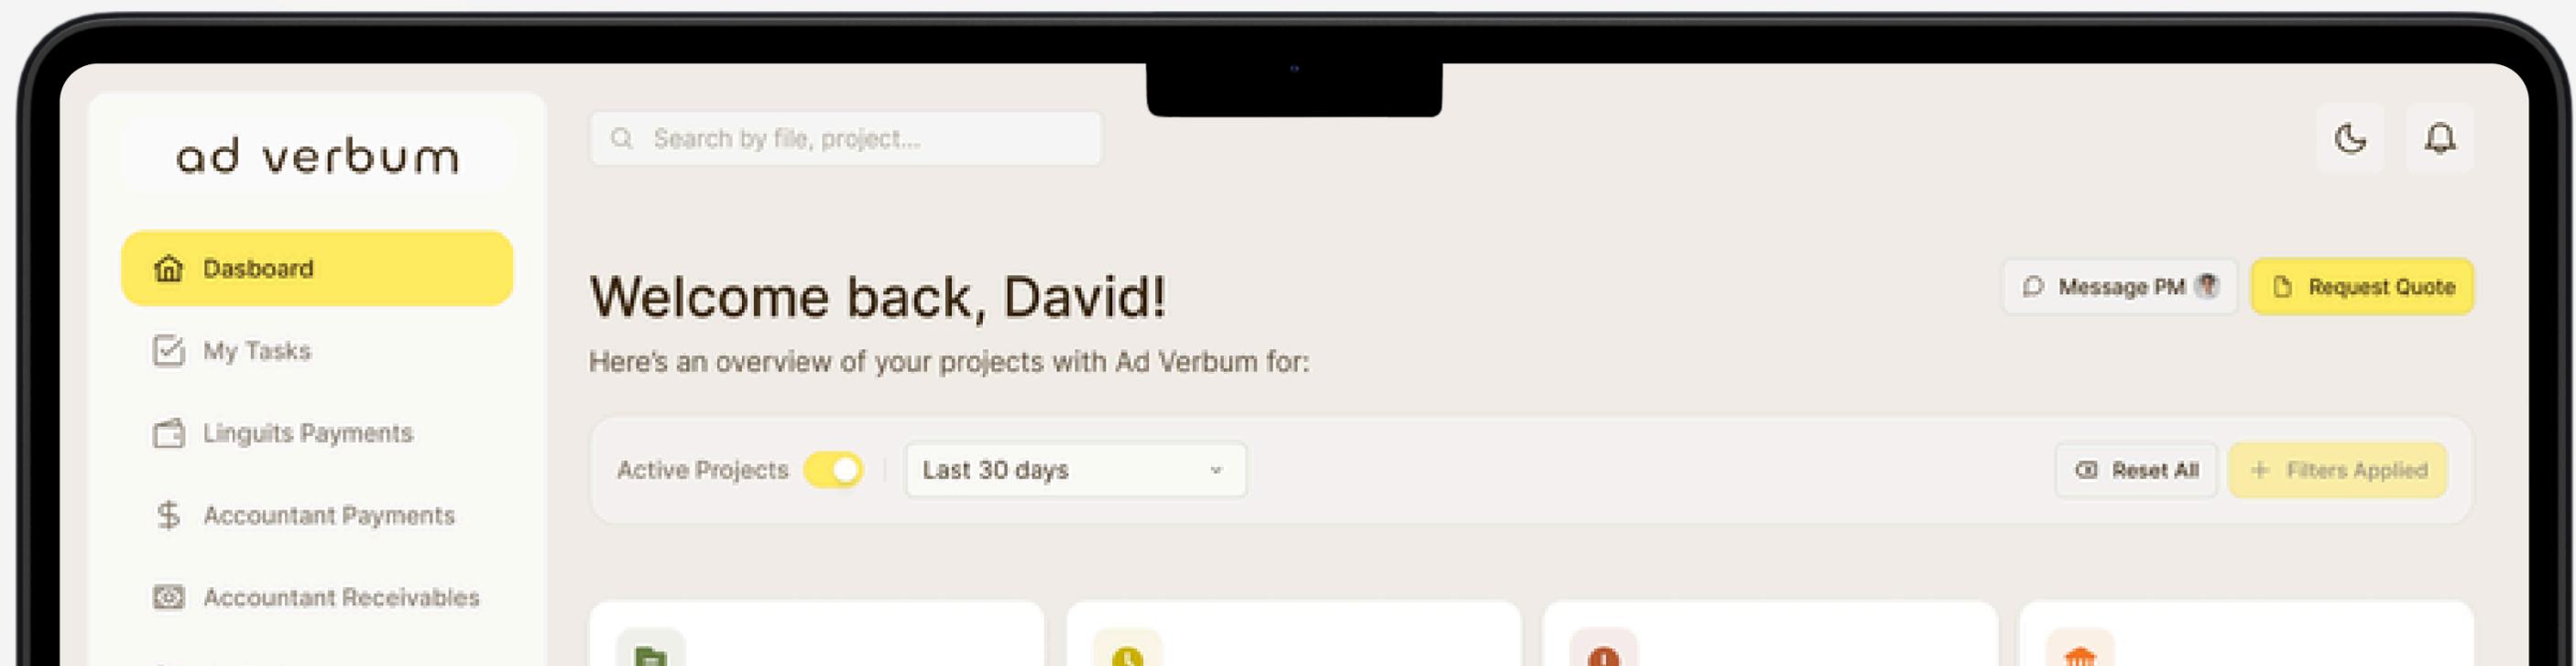

## Use Your Translation Assets

The TMS allows uploading of Translation **Memories (TMs)** and **Term Bases (TBs)** to fine-tune the AI output on the fly in line with your existing translations.

## API and On-site Deployment

Integrate with your CMS system, or deploy on your hardware. Choose your private LLM, full on-site deployment, depending on your security requirements.

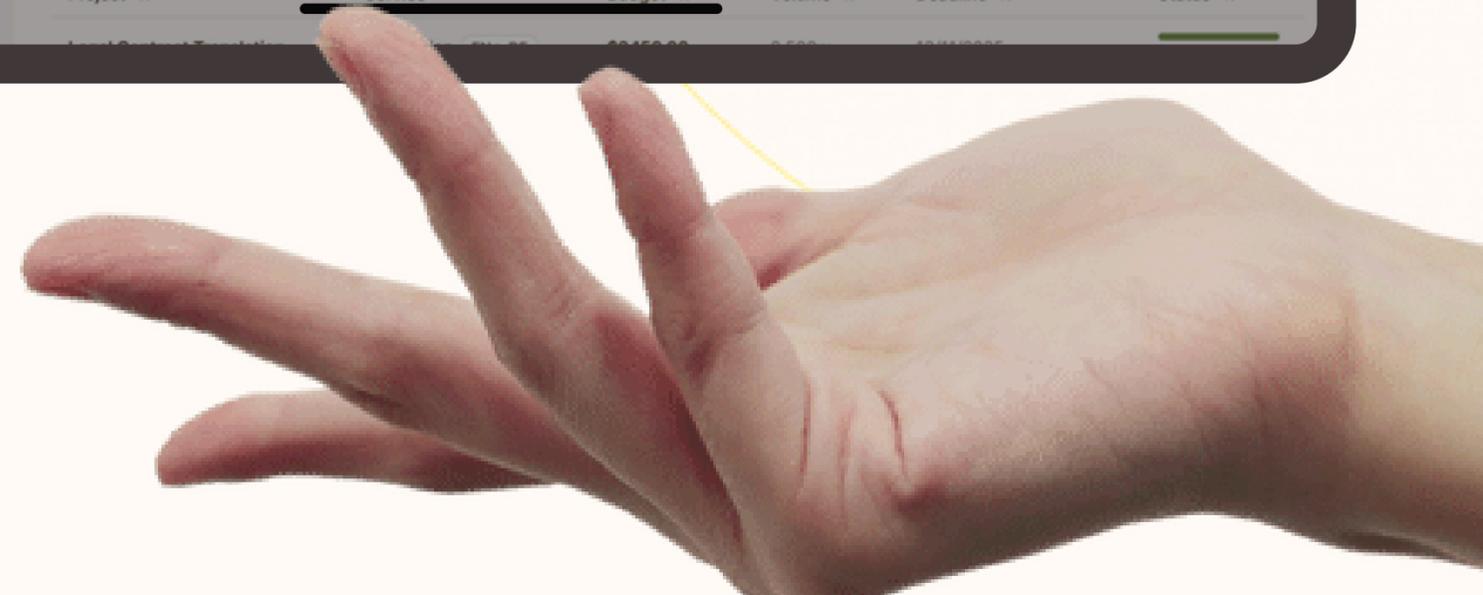

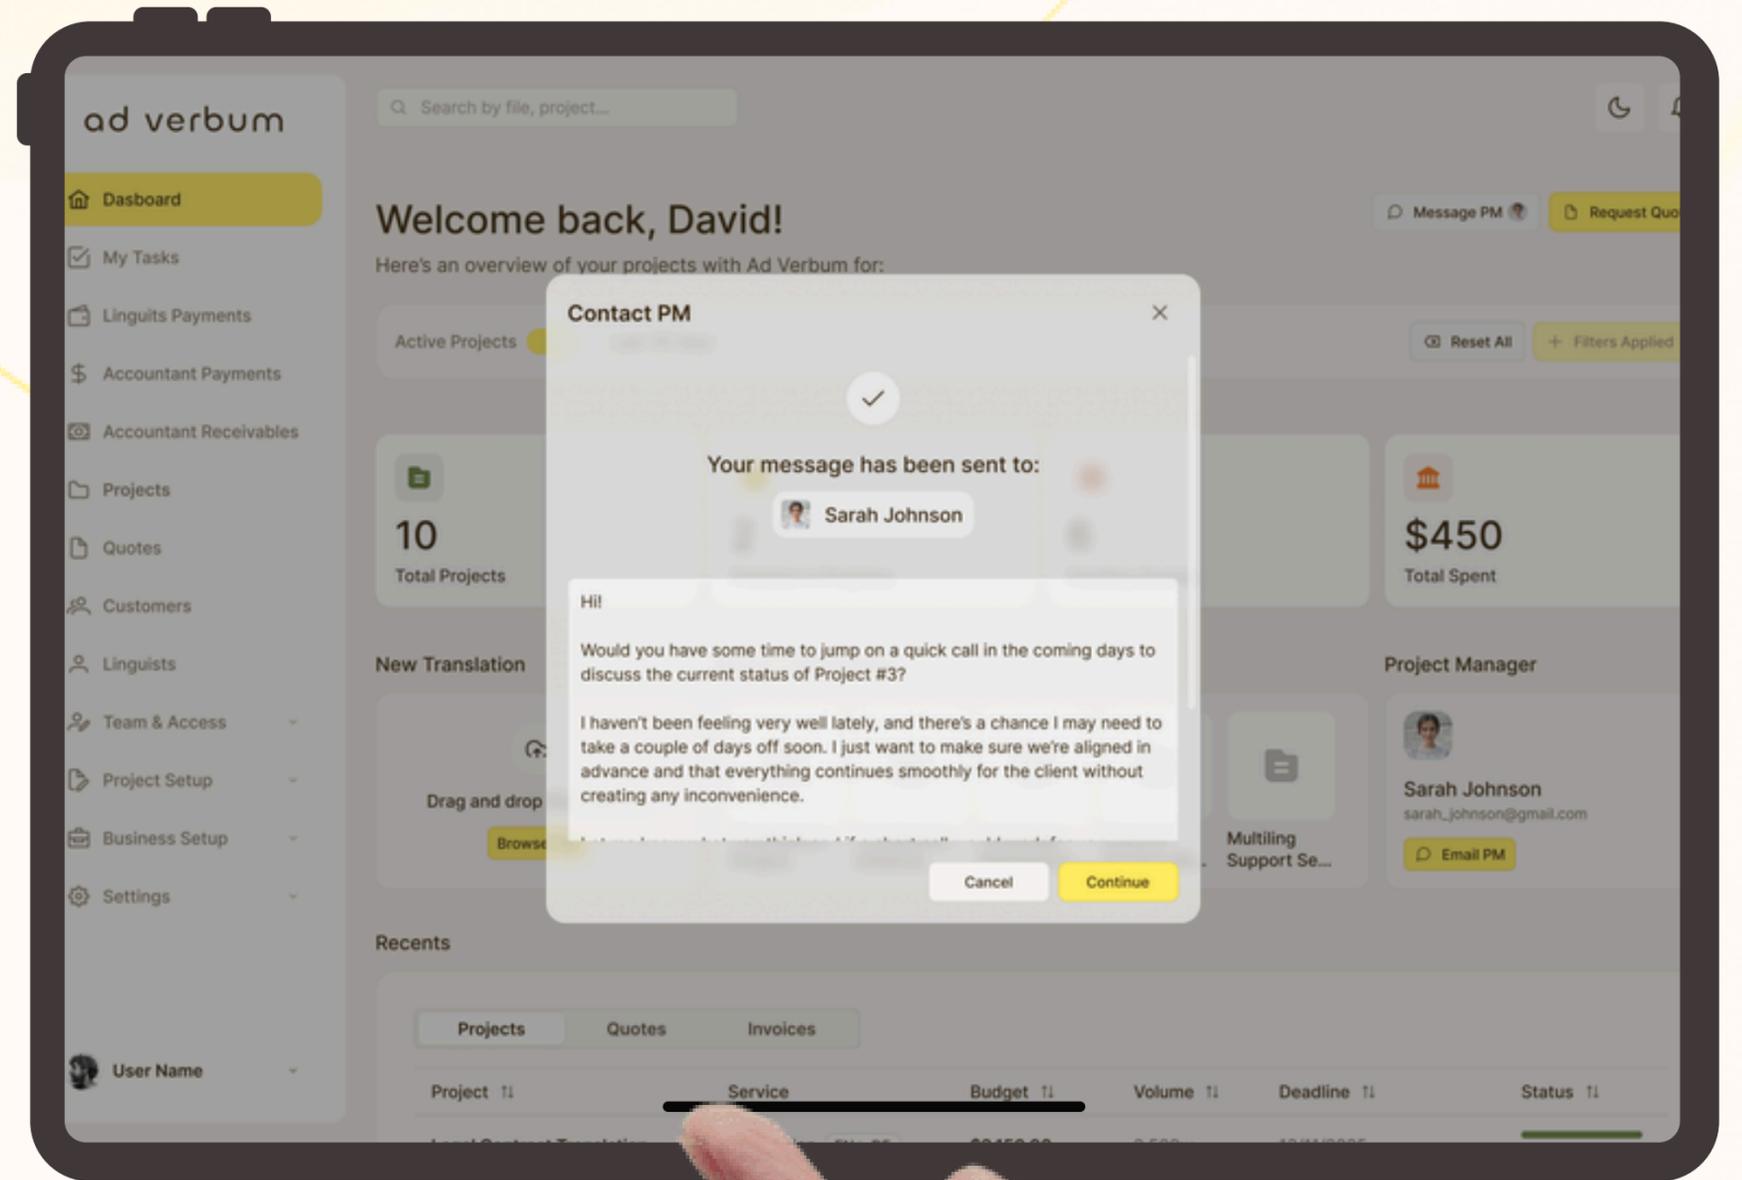

# Who is responsible for your AI output?

**We are.**

**The essential tool that solves your problem by certified compliance**

We assume full accountability for AI-generated content by adhering to certified standards. Our certified human-in-the-loop process mitigates hallucination risks and ensures output meets strict enterprise quality criteria.
