

Soku Minute Mattress

supplies thousands of hygienically safe, insulating, and automatically inflatable mattresses at a moment's notice.

Made with circular plastic film and distributed on rolls of 50 pieces. It's inflated by an automatic inflator when and where it is needed. This gives the patented system its unique qualities that make it perfect for deployment in the relief-aid, emergency response and defence industries.

Trusted by the **Red Cross**

“Significantly improved our operations”

Michel Toebast, the Netherlands **Red Cross**

Two hundred mattresses per hour, ready for immediate use.

Activate the inflator, flip the switch, and you're distributing mattresses. Any member of your team can safely begin deployment in under a minute.

Mattresses are inflated on-site using Soku's patented technology and custom inflation machines. Without prior training, a staff member can load a roll of mattresses onto the machine. The film is fed into the machine, and with the push of a button, up to 200 mattresses are produced per hour, ready for use.

Storing and shipping 2000 units per pallet ensures unmatched efficiency.

The entire setup is crafted to reduce logistical obstacles. Soku Minute Mattresses on a roll are so compact that they can be loaded by the thousands into a van, a personal vehicle, or even a helicopter if necessary.

Whether storage is local on high-demand hot-spots like airports, which require swift and efficient handling, or in large-scale central logistics centers where space and organization are paramount, the possibilities for streamlining operations are numerous and the cost efficiency is remarkably advantageous. By optimizing storage locations strategically, organisations can significantly reduce overhead costs, enhance distribution speed, and improve overall operational effectiveness.

Unmatched comfort and hygiene with a sustainable future.

The Soku Minute Mattress is designed to be inflated just once, creating a supportive bed. It can be conveniently deflated by puncturing it, which not only allows for easy disposal or storage but also ensures that the bed is clean and hygienically safe for every use.

This unique feature enhances the mattress's distinct comfort level, as it is engineered with numerous individually sealed air chambers. These chambers are designed to offer support by evenly distributing the user's weight across the surface of the mattress. Furthermore, these air chambers also ensure superior insulation.

Supported by an innovative and sustainable recycling program that is both future-proof and closed-loop, Soku is committed to environmental responsibility by ensuring that its materials can be efficiently recirculated back into its original supply chain, reducing waste and promoting sustainability.

Exceptional High Volume Production Capacity

Manufactured at well-established and highly efficient production facilities that boast a remarkable high throughput, ensuring the ability to produce large quantities of products swiftly and consistently to meet high demand levels without compromising on quality..

Mattresses are produced on traditional industrial production lines designed to function reliably around the clock, every day of the year, without interruption. This continuous operation is supported by state-of-the-art machinery and automated systems, which ensure quality and efficiency in production processes. The substantial volumes these facilities can handle enable us to quickly scale up to meet increasing market demands. Production capabilities in the EU and USA are established, working in partnership with leading industry partners who manufacture and recycle our products locally, thereby shortening supply chains and reducing Soku's environmental footprint.

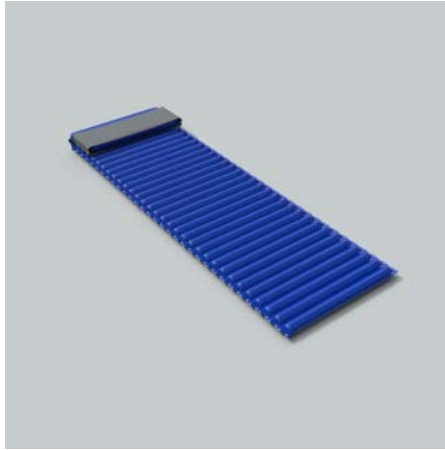

Configurations

The Soku Minute Mattress is available in two variations and can also be used as an add on for existing equipment.

Solo

The standard mattress is lightweight at 200g and has dimensions of 197 x 65 x 6cm.

Pillow

Soku Minute Mattress with incorporated pillow and pillowcase.

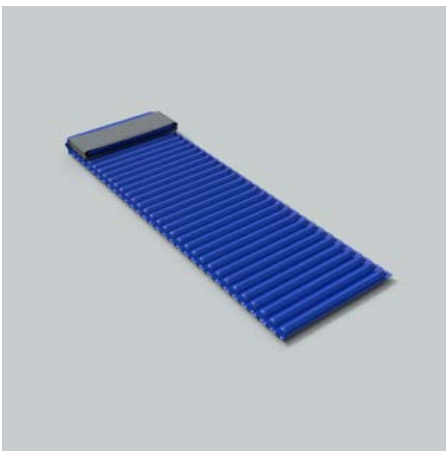

Add on

Use the Soku Minute Mattress to upgrade existing equipment for elevated comfort.

Colours

Available in its standard color blue. Customization for other colours and prints possible.

Equipment

For inflating the Soku Minute Mattress our bespoke inflator is needed. It's build in The Netherlands and has been proven in the field. Offered for both rental and purchase.

Inflator

Compatible with 230v and 120v power sources, and with an additional converter, it can also operate on 12v or 24v.

Inflator crate

For safe transportation of the inflator to the field, we can provide a aluminium crate with bespoke foam interior to keep it secure.
