Enhancing lives

Windows reinvented

For modern life

 **REHAU**
Window Solutions

We create sustainable environments for living and working that enhance the comfort and well-being of people worldwide.

CEO WS
Carsten Heuer

- ~ 3,000 employees
- 8 Production Plants, 3 Recycling Plants
- Active in more than 65 countries
- Annual production of approximately 14,000,000 windows with REHAU profiles
- Top 5 PVC window system manufacturers worldwide, Top 2 PVC Recycler - EMEA

REHAU Window Solutions internationally active and successful with our partners

-  **REHAU Production**
 - Blaenau (UK)
 - Morhange (FR)
 - Wittmund (DE)
 - Screm (PL)
 - Sibiu (RO)
 - Celaya (USA)
 - Buena (ARG)
 - Johannesburg (ZA)

-  **REHAU Recycling**
 - Runcorn (UK)
 - Höxter (DE)
 - Srem (PL)

Commercial use

A changing world A universe of opportunities

REHAU Window Solutions bears the responsibility to actively support partners and customers and to make their business future-proof – even in challenging times.

On the basis of global megatrends, fantastic opportunities arise to develop future-oriented, intelligent and connected solutions and services that help our partners achieve greater success. Long-term successful innovations pursue a consistently holistic approach in this respect.

**Global
megatrends are
our driving force**

Future-proof profile systems make windows more stable, **more efficient**, **more modular** and **more circular**.

System accessories create individual windows with **unique added value**.

Products, services, manufacturing and services are becoming **smart** – and thus new promising business models are emerging.

Seizing the opportunities of **digitalisation**: Directly with the customer, close to the consumer, **efficient** in planning and execution, and preferred for new orders.

High demand for sustainable solutions and **circular economy** as well as **new regulations** are changing the window industry.

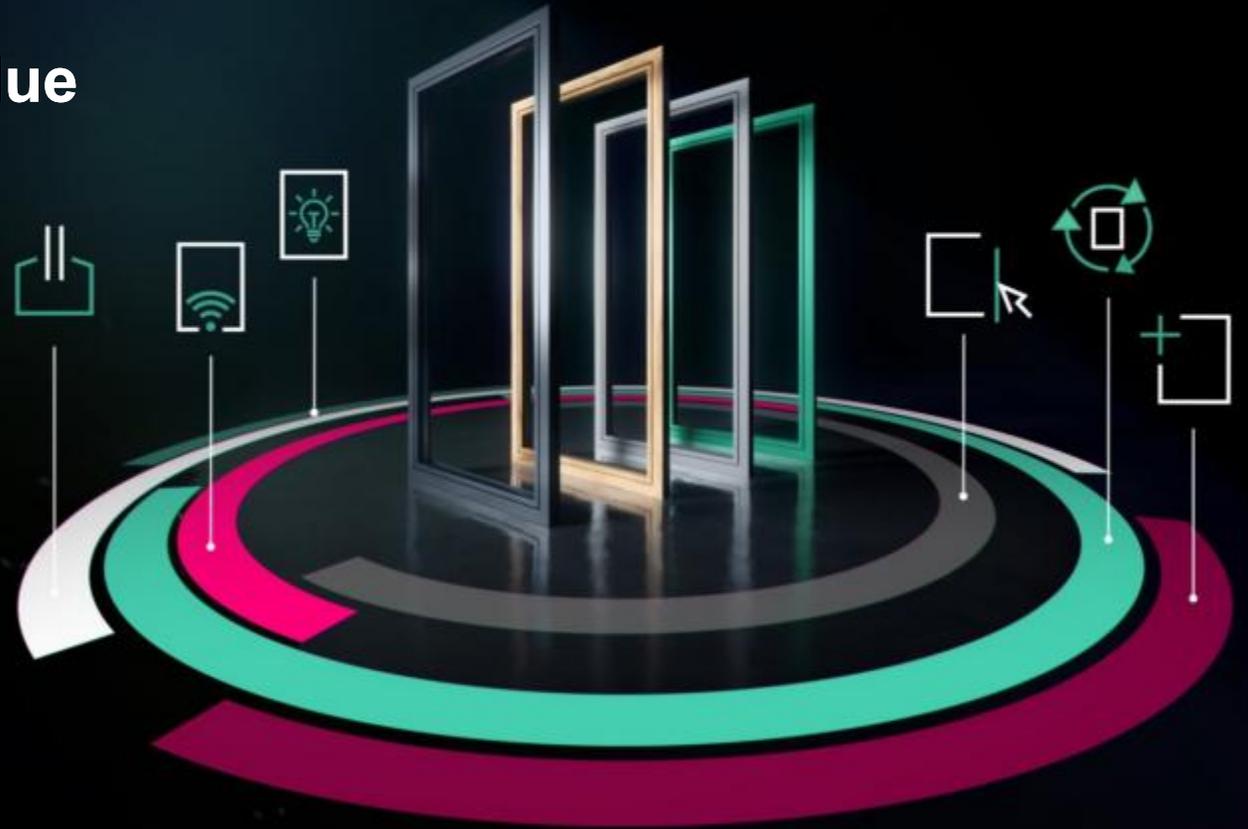

Always one step ahead. With **75 years of experience and pioneering spirit**, we strive for ever better solutions – so that you are also **prepared for the future**.

All in One Partner

For success along the entire value chain

As a reliable *All in One Partner* we support the growth of our partners with ever new innovations that offer attractive business options far beyond the core business of window profiles.

We combine *traditional craftsmanship* with *digital solutions* and a lived *circular economy*.

REHAU Window Solutions: New strategy for new opportunities

We support the business development of our customers through perfectly coordinated modules.

System Accessories

Clever add-ons from a single source

Solutions for installation, accessibility, operating comfort, sun protection and much more: Well thought-out system enhancements significantly upgrade every window from REHAU Window Solutions.

Smart Solutions Modern. Clever. Perfectly integrated.

Smart privacy solutions meet future-proof standards. For privacy at the touch of a button and integrated glare protection.

Front door with Smart Privacy

Privacy protection

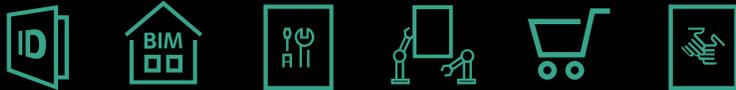

Glare protection

Digital Solutions Optimise processes. Increase efficiency.

Simply generate more business while simultaneously making order processing, planning, production, assembly and after-sales services more efficient.

Sustainability Successfully implementing responsibility

Energy efficiency, recycles, circular economy and window tracking: REHAU Window Solutions continues to expand its decades-long leading position in the field of lived sustainability both within and outside the industry.

Very soon, we will be operating fully CO₂-neutral. The REHAU Window.ID enables intelligent urban mining – and turns windows into raw material depots.

Sustainable action for future generations

Integral part of our corporate strategy

We strive for sustainable and value-oriented growth in the long term.

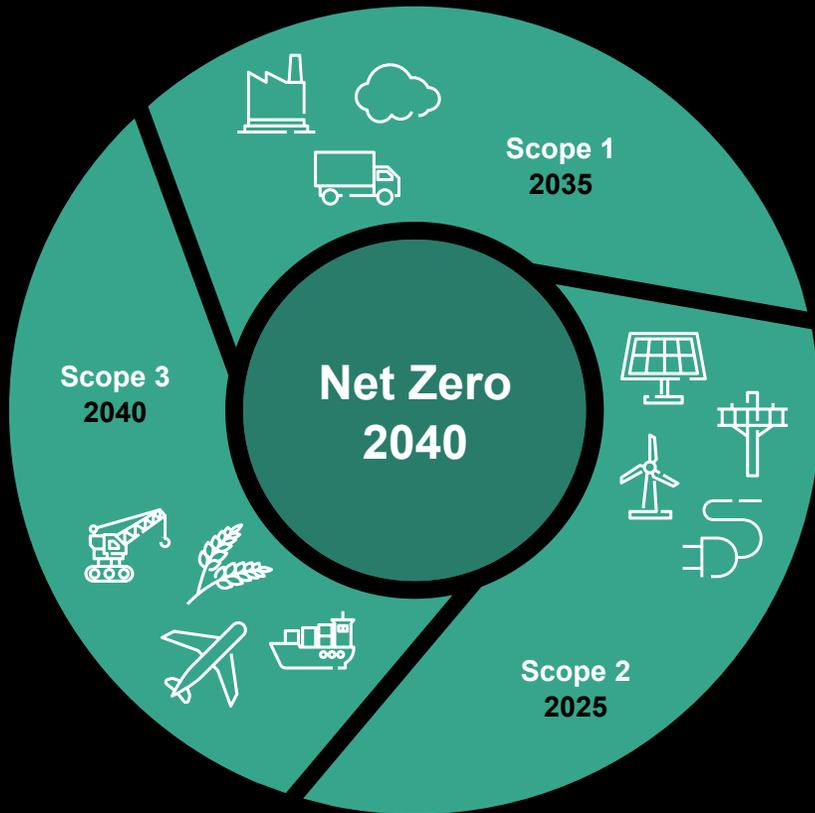

We see ourselves as drivers of a sustainable circular economy.

We promote diversity in training and further education as well as in project teams in order to advance the principle of equality.

From energy efficiency to climate protection – proactive measures in the fight against climate change.

Absolute Contraction Target 2030²: - 40% // - 21%³ // - 25%

Net Zero targets follow a clear strategy

REHAU Window Solutions integrates the concept of sustainability strategically and consistently into day-to-day business.

Shaping sustainability: Every day

Products, processes and perspectives: With more than 30 years of experience, REHAU Window Solutions defines how sustainability can be achieved in the window industry. With determination. With courage. With independence.

Circularity 100% in our own hands

Production

All European REHAU plants have been certified with the independent VinylPlus product label due to their sustainable production processes.

Extrusion

The unique REHAU co-extrusion process enables the production of window and accessory profiles that are made from recycled material on the inside. More than 60% of REHAU's production volume already contains a recycled content of up to 80%.

Products

REHAU EcoPuls window profile systems are unique in the window industry when it comes to closed-loop circular economy. The result: up to 100,000 t CO₂ savings annually, which corresponds to the binding capacity of around 8.0 million trees over an area of approximately 141,000 football pitches.

Application

REHAU premium quality always guarantees maximum service life for our windows, which, thanks to their high energy efficiency, also contribute significantly to resource conservation during use.

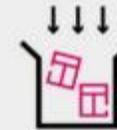

Identification

Millions of old PVC windows are a valuable resource for new plastic windows. With the REHAU Window.ID, the digital window passport, it becomes clear where the raw materials of the future are installed. This makes it easier to return the materials to the recycling loop at a later stage.

Recycling

Complete old windows are separated into various raw materials (e.g. glass and metal) and recycled. Crucial for us are the PVC components, which primarily originate from the old window profiles. These are processed into high-quality recycled granulate. In doing so, up to 88% CO₂ emissions are saved compared to the production of new PVC.

Collection

To ensure effective recovery of old materials, we have established a Europe-wide network with almost 2,000 partners through which old materials are collected. As an industry specialist, DEKURA, together with REHAU subsidiaries, manages to produce around 40,000 t of material for new PVC windows each year. In total, all recycling companies collect around 70,000 t of material.

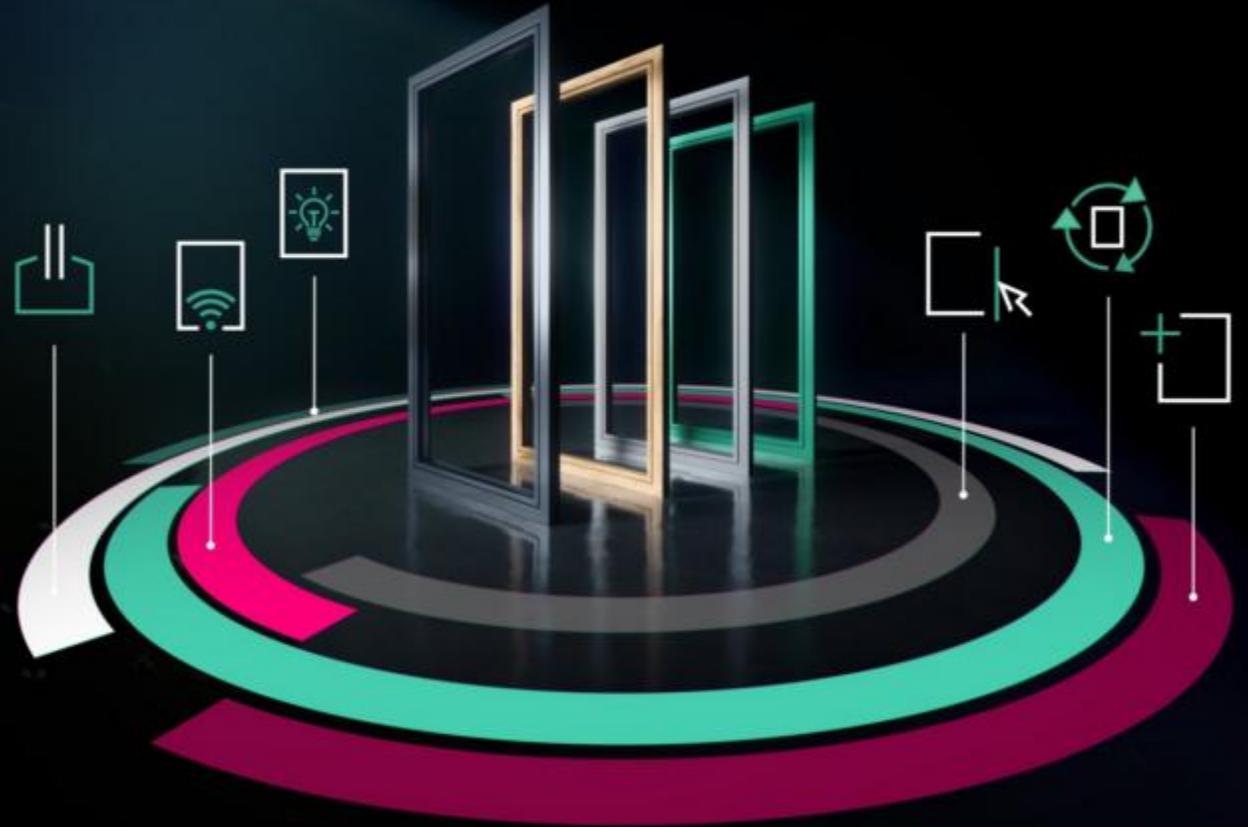

Lived sustainability

For more than 30 years, REHAU Window Solutions has been setting standards for circular economy
