

# BlueCat helps you accelerate your network transformation

Modernize, optimize, and secure your network infrastructure  
with Intelligent NetOps

# The network that got you here won't take you there

In today's fast-paced digital landscape, network modernization is the backbone of business success. Seamless customer experiences, effortless cloud integration, and the flexibility to work from anywhere all hinge on a resilient, future-ready network.

This requires a new model of network operations that links foundational core services with a deep, predictive understanding of network health and performance to improve change readiness.

BlueCat helps enterprises harness the power of Intelligent Network Operations (NetOps) to create predictive, fluidly responsive networks that enable the business.

## Intelligent NetOps solutions for accelerated network modernization

Pragmatic solutions to more easily change the network as business requirements demand.

|                                                                                     |                                                                                                                                                                                                                                |
|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p><b>Unified core network services</b></p> <p>Consolidate, automate, and streamline DNS, DHCP, and IP address management (together known as DDI) on premises and across any cloud for centralized visibility and control.</p> |
|  | <p><b>Security &amp; compliance</b></p> <p>Protective DNS that helps you detect threats and prevent attacks, continuously verify queries and endpoints, and resolve security incidents faster.</p>                             |
|  | <p><b>Multicloud management</b></p> <p>Discover and synchronize IP and DNS across hybrid and multicloud environments, and resolve across all DNS zones for every cloud type.</p>                                               |
|  | <p><b>Network automation and discovery</b></p> <p>Automate and simplify your DNS operations with applications and plugins that eliminate manual tasks and integrate with third-party solutions.</p>                            |
|  | <p><b>Network observability and intelligence</b></p> <p>Get deep visibility into network environments to proactively identify and preemptively remediate issues—across security, performance, and uptime.</p>                  |

# The BlueCat portfolio for Intelligent NetOps

Intelligent NetOps is an integrated portfolio of network infrastructure services across core network services, network observability and intelligence, network automation and discovery, multicloud management, and security and compliance.

## Unified core network services

### Integrity

#### **Integrated DNS, DHCP, and IP address management**

A DDI management platform for large, complex, and mission-critical enterprise environments

### Micetro

#### **A flexible overlay for orchestrating DDI**

Intuitive DDI orchestration platform that manages a broad range of DNS and DHCP services

## Network observability and intelligence

### LiveNX

#### **Industry's most advanced network performance monitoring (NPM) solution**

Visibility across on-premises, SD-WAN, cloud and hybrid networks with actionable insights to understand what's happening in real-time

### LiveWire

#### **Industry's highest performing network packet capture and forensics solution**

Capture and analyze packets to serve both network performance and security use cases

### LiveAssurance

#### **Proactive network observability and repair**

Automated and AI-assisted health checks of your DDI, firewalls, or load balancers and recommended remediation steps

## Multicloud management and Security & Compliance

### Edge

#### **An intelligent DNS resolver for DDI enhancements and advanced threat detection and security**

Unprecedented visibility and policy-based control of DNS traffic to optimize and secure your network

BlueCat's Intelligent Network Operations (NetOps) provide the analytics and intelligence needed to enable, optimize, and secure the network to achieve business goals. With an Intelligent NetOps suite, organizations can more easily change and modernize their network as business requirements demand. BlueCat's growing portfolio includes unified core network services, security and compliance, as well as network observability and intelligence. These solutions can be deployed in hybrid or multicloud environments, in the data center, at remote or branch locations, and via SD-WAN. BlueCat is headquartered in Toronto and New York, with additional offices in the United States, France, Germany, Iceland, Japan, Singapore, Serbia, and the United Kingdom.
