INTEGRATED RISK & TRUST MANAGEMENT

Compliance, trust, risk, privacy and AI governance on one control set, monitored continuously.

Vanta connects to **400+ tools**, pulls evidence automatically and tests your controls continuously, so six programmes run on **one control set, one evidence source and one risk register** instead of six disconnected point tools.

POINT-IN-TIME CHECKS

Evidence collected by hand for one audit day, then **a year-long blind spot** across controls, vendors and privacy.

VANTA CONTINUOUS MONITORING

Automated tests run hourly against your systems, and vendors are monitored continuously, so drift is flagged the moment it appears.

Why integrated matters

ONE CONTROL SET
A control implemented once counts across **every framework you carry**, with cross-mapping built in.

ONE EVIDENCE SOURCE
The same live data from 400+ integrations powers **audits, your Trust Center and vendor reviews**.

ONE RISK VIEW
Failing tests, vendor findings, all risks (IT/security, privacy, AI, etc.) land in **one register**, monitored continuously rather than checked yearly.

82% less time per framework and attestation-related audit

81% faster completion of customer security reviews

50% reduction in vendor risk assessment time

TURN OVER FOR THE SIX PRODUCT AREAS →

SIX PRODUCT AREAS · ONE PLATFORM

Every programme shares the same controls, evidence and risk register.

From audit-ready compliance and a live Trust Center to vendor, privacy and AI risk, every programme draws on the same automated evidence and feeds the same risk register, so security teams add coverage without adding another tool.

Compliance

- **Continuous, automated control monitoring** across 35+ frameworks: SOC 2, ISO 27001, ISO 42001, GDPR, NIS 2, DORA, PCI DSS, Cyber Essentials and more.
- **400+ integrations** pull audit evidence automatically; hourly automated tests flag drift the moment a control fails.
- **Cross-map controls once** and reuse them across every framework you carry, so evidence stays audit-ready without repeating the work.

Trust Center

- **Publish real-time control and test status** straight from your live GRC programme, not a point-in-time snapshot.
- **Self-serve access** to certifications and reports, pen tests and policies, gated by one-click.
- **AI answers questions and requirements** on the page and responds to questionnaires from a knowledge base synced to your latest relevant documentation.

Risk Management

- **One risk register:** assign owners, score inherent risk (impact × likelihood), set treatment plans, track residual risk.
- **Risks link to controls and automated tests,** with immediate notification when a linked test fails.
- **100+ pre-built risk scenarios** with suggested control mapping; heatmaps, trends and snapshots to share with executives and auditors.

Third-Party Risk (TPRM)

- **Automatic vendor discovery via integrations** surfaces shadow IT and newly adopted AI vendors.
- **AI-powered assessments** pull findings, documentation and certifications from vendor trust centers / web portals into questionnaires and auto-flag issues; inherent-risk rubrics tier every vendor.
- **Continuous vendor monitoring** for incidents, vulnerabilities and material changes; findings feed directly into your risk register.

Privacy

- **Data inventory / Records of Processing Activities:** purposes, data categories, legal bases and processors in one place.
- **Privacy Assessments run inside Vanta** with instant AI answers, tied to the processing activities in your RoPA. **DSARs are managed in Vanta** and filed through a public web portal.
- **Privacy work maps back to GDPR, CCPA and the other privacy laws,** while ISO 27701 and ISO 27018 controls are already monitored on the platform.

AI Governance

- **ISO 42001, NIST AI RMF and EU AI Act readiness:** controls, policies and documents mapped and tracked alongside every other framework.
- **Automatically detect AI models** in connected cloud accounts (AWS Bedrock, GCP Vertex AI, Azure AI Foundry). AI Inventory of AI products, agents and models EARLY ACCESS
- **AI vendors discovered, assessed and monitored through TPRM;** AI risk and policy libraries sit on the same control set.

Benchmarks: IDC White Paper, The Business Value of Vanta (doc #US52656824, Jan 2025). Framework and integration counts, and features, reflect Vanta public materials as of September 2026 and may change. Continuous vendor monitoring is part of TPRM with monitoring. Privacy capabilities require a privacy framework (GDPR, US Data Privacy, ISO 27701 or ISO 27018) on an eligible package. AI Inventory is in early access.
