

Identity Manager by One Identity

Enterprise identity governance and administration built
for your business needs

Overview

Identity governance and administration (IGA) frameworks can be expensive to build, time-consuming to deploy and maintain, and difficult to manage. Don't let these solutions burden your IT organization and prevent you from protecting your organization and meeting your business goals.

Increase security and productivity by providing your users with access to the data and applications they need, when they need it, to get their jobs done without incurring risk. Let One Identity Manager by One Identity ensure your needs are met and your budget is maintained.

Identity Manager by One Identity governs and secures your organization's data and users, meets uptime requirements, reduces risk and satisfies compliance by giving users access to the data and applications they need – and only what they need – whether on premises, hybrid or in the cloud. With the scalable and modular Identity Manager by One Identity architecture, your business needs drive your identity security strategy, unifying and automating security policies and satisfying governance and compliance needs – today and into the future.

Mitigate risk, control access,
govern identities, secure data.

Benefits

- **Deploy** an identity-centric, Zero Trust, least privilege model
- **Govern** access to on-premises, cloud and hybrid resources from request through fulfillment
- **Reduce** risk by ensuring users have only the access they need to do their jobs
- **Satisfy** audit and compliance initiatives with attestation and recertification policies and reports
- **Put** access decisions where they belong – in the hands of the business
- **Build** on existing investments and infrastructure and grow from there

Features

Identity lifecycle management

Secure user access and automate enterprise provisioning and deprovisioning to any target, on-premises or in the cloud, from a single platform.

SAP-certified integration

Provide certified deep SAP Integration with fine-grained capabilities including the import of aggregated SAP transaction usage data, to enhance existing SAP security models and connect accounts under governance.

**Also available: SAP Fieldglass connector: See “Connections” section, below.*

Compliance

Report on user-level and application-level access and utilization to satisfy compliance regulations and internal reporting needs.

Empower line of business personnel to certify user and group access and entitlements. View group and list status on a dashboard and via certification reports for ease of administration.

Risk reduction

Ingest and process both internal and external risk scores to make informed decisions, strengthen your security posture, and ensure every identity account (whether users, customers, partners or other constituents) has access to only what it should, only when it should.

Cloud support

Govern cloud, hybrid and on-premises identity resources, including data and applications, from a single comprehensive platform. Utilize hundreds of cloud connectors available via One Identity Connect™.

ITDR playbooks

Create and apply custom identity threat detection and response (ITDR) playbooks to identify and respond to policy violations, enhancing identity protection.

User experience

Modern, easy-to-use interface

Utilize a web-based interface for a modern governance experience with visibility and control from anywhere.

AI-assisted reporting

Submit natural-language, read-only queries using generative AI for faster insights to support compliance audits or internal reporting needs.

Self-service access portal

Enable your users to request permissions to physical assets, groups and distribution lists. Request to reset their passwords throughout their

identity lifecycle using a predefined approval process and workflow based on your organization's policies. This customizable, easy-to-use portal streamlines identity governance, allowing your IT resources to focus on strategic matters.

Integrations

Privilege access governance

Integrate privileged access management (PAM) technology to protect and control privileged access with a 360-degree view on users, accounts and activities. Consolidate governance and management systems to streamline lifecycle management.

Behavior-driven governance

Use access insights in OneLogin or Entra ID to inform governance policy decisions in Identity Manager by One Identity at the account and application level for enforcement of Zero Trust least privilege.

Enhanced AD governance

Streamline AD/Entra ID management with enhanced security, simplified integration and advanced governance.

Integrations and connectors

Extend identity governance capabilities to the cloud and reduce cloud application onboarding time with our out-of-the-box, open-standard connectors for every industry, ready for your use.

About One Identity

Headquartered in Cork, Ireland, One Identity delivers trusted identity security for enterprises worldwide to protect and simplify access to digital identities. With flexible deployment options and subscription terms – from self-managed to fully managed – our solutions integrate seamlessly into your identity fabric to strengthen your identity perimeter, protect against breaches and ensure governance and compliance. Trusted by more than 11,000 organizations managing over 500 million identities, One Identity is a leader in identity governance and administration (IGA) and privileged access management (PAM) for security without compromise.
